PLANS
FOR THE PROPOSED IMPROVEMENT OF A
STATE HIGHWAY
IN MORTON COUNTY
FEDERAL AID PROJECT NO. FI-194-4(45)000
BASE, HOT BITUMINOUS PAVEMENT & INCIDENTALS

LENGTH OF PROJECT		
PROJECT	MILES-GROSS	MILES-NET
FI-194-4(45)	1.060	0.968
TOTALS	1.060	0.968

.092 Mi. deducted for Mdinline Structure

GOVERNING SPECIFICATIONS:
Standard Specifications adopted by the North Dakota State Highway Department, Oct. 1976, and approved by the Federal Highway Administration on December 17, 1976, and other Contract Provisions submitted herewith.

DESIGN DATA

TRAFFIC	AVERAGE DAILY			EST. 30TH MAX. HR.
CURRENT TRAFFIC (1981)	16200 PASS.	800 TRUCKS	17000 TOTAL	1760
TRAFFIC FORECAST (2001)	20900 PASS.	1100 TRUCKS	22000 TOTAL	2260

DESIGN SPEED 50 MPH
TRAFFIC CLASSIFICATION "M"
MINIMUM SIGHT DISTANCE (STOPPING) 300'

TABLE OF CONTENTS

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO
8	N.D.	FI-194-4(45)	3

NOTE SHEET

1. PLAN DIMENSIONS: Thickness shown on the typical sections for surfacing are approximate. It is intended that the plan tonnages provided for by the Basis of Estimate will be used uniformly throughout the project unless otherwise authorized by the Engineer.

2. SHOULDERS: The width of the shoulder shown on the typical sections may be reduced and/or the shoulder edge bevel extended in order to maintain a shoulder edge slope consistent with the roadway inslope,

3. PATCHING: Patching operations shall be performed as follows:

   (1) Remove existing surfacing, base and subgrade material to a depth as required to establish a satisfactory subgrade.

   (2) Aggregate will be placed and compacted to bottom of existing bituminous pavement, but not less than 3" below the existing surface. Compaction shall be with rubber-tired equipment. Class 5 Aggregate will be used for patching purposes.

   (3) Hot bituminous material will be placed with a motor patrol. Maximum lift 3". Compaction of each lift with rubber-tired equipment.

   (4) The patches shall be allowed 48 hours of curing time prior to being overlaid, except in such instances where the break-up occurs during the actual paving operation.

4. EXCAVATION: Excavate, if necessary, at all points where existing pavement is met & at bridge ends to allow placement of the full depth of surfacing course. Excavation not a pay item, to be considered incidental to other items.

5. MILLING BITUMINOUS SURFACE (MEMORIAL BRIDGE APPROACHES): See Special Provision and Milling & Surfacing layout sheet. The Contractor shall not permit two-way public traffic past the bituminous milling or machine laydown operations. The Contractor shall furnish a pilot car to control one-way traffic. Measurement & Payment for the item "Pilot Car" will be based on hours that the vehicle is actually in use.

6. GRADE OF BITUMEN: Grade of liquid asphalt for surface treatment to be specified by the Engineer. 120-150

7. COMPACTION OF HOT BITUMINOUS PAVEMENT: A minimum of 2 approved rollers shall be used for the compaction of each main line paving course. The Engineer may require the use of a pneumatic-tired roller to assist in obtaining a dense surface texture. The initial breakdown rolling shall be completed before the mat temperature drops below 170° F. The maximum speed of rollers when used in the vibratory mode shall be 3 MPH.

8. HOT BITUMINOUS PAVEMENT: The 4" Hot Bit. Pavement shall be laid in approximately two (2) equal lifts and the 8" depth in three (3) lifts with the top lift having a depth of approximately 2".

9. FIELD LABORATORY: If deemed unnecessary by the Engineer in the field, the item "Field Laboratory" shall be deleted.

10. SPECIFIED DENSITY: Compaction of the Hot Bit. Pavement shall be in accordance with Sec. 406-4.8.2 of the Standard Specifications. The Hot Bit. Pavement shall be compacted to 97% of the Marshall Density determined in the field. The average of the sub-lot densities shall equal 97% or more, and no one sub-lot density shall be less than 95%.

11. CLASS 25 AGGREGATE: Class 25 Aggregate shall have a maximum clay content of 3% and a maximum shale and soft rock content of 4%. Not less than 50% by weight of the particles retained on No. 4 Sieve shall have at least one fractured face.

12. CURB & GUTTER-TYPE I: Class AE Concrete shall be used. Curb and Gutter (reinforced) at bridge ends shall be installed in accordance with the details shown in the plans. Backfill for curbing shall be in accordance with Sec. 708-3,1,7, of the Standard Specifications. Cost for backfill to be included in the price bid for Curb and Gutter.

13. SEEDED AREAS: The Contractor may operate his vehicles and equipment on grassed areas within the right-of-way; however, the Contractor shall, at his own expense repair any damaged areas with topsoil and Class IV Seed.

SS-1H

14. TACK COAT: When directed by the Engineer, Emulsified Asphalt for Tack Coat shall be diluted with water prior to application in a 50:50 ratio or other approved proportions. Quantity shown does not include water. Cost of water shall be included in the price bid for Emulsified Asphalt for Tack Coat.

15. SURFACE TREATMENT: Surface treatment shall not be applied in those areas where plastic pavement marking film lines and messages are to be installed.

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	FI-194-4(45)	4

NOTE SHEET CONT'D.

16. MEDIAN CROSSOVER (APPROX. 210' NORTH OF BEGINNING OF PROJECT): The Engineer shall determine when the median crossover (approx. 500 c.y.) shall be removed. Scheduling should be done so as to have the minimum amount of interference with traffic. All available topsoil in the areas to be disturbed shall be salvaged and stockpiled so it may be spread over the disturbed areas and seeded with a type specified by the Engineer. The embankment material shall be disposed of within the right-of-way as designated by the Engineer and the surfacing material shall be disposed of by the Contractor at a location obtained by him (and approved by the Engineer) off the highway right-of-way. The present drainage pattern shall not be disrupted by the removal and disposal of any material. Cost for removal and disposal of the material, stockpiling and spreading of topsoil and seeding shall be included in the price bid for "Removal of Bypass", Item 724.

17. EXISTING SIGNS & BARRICADE ASSEMBLIES: The Engineer shall determine when the construction signing at the median crossover for diverting traffic to the northwest ramp and the barricade assemblies in place at the ramps and loops shall be removed. The signs and barricades shall be stockpiled at a location within the right-o-fway as directed by the Engineer. Cost of removal and stockpiling to be incidental to the price bid for "Traffic Control". Ownership to remain with the State.

18. PLASTIC PAVEMENT MARKING FILM (RETRO-REFL.) LINE AND MESSAGE: This pavement marking shall be applied to the top lift of Hot Bit. Pavement while the material is still warm and rolled into the surface with the steel wheel roller. Cost of installing, rolling, labor and necessary equipment shall be included in the price bid for "Plastic Pavement Marking Film (Retro-Refl.) Line and Message".

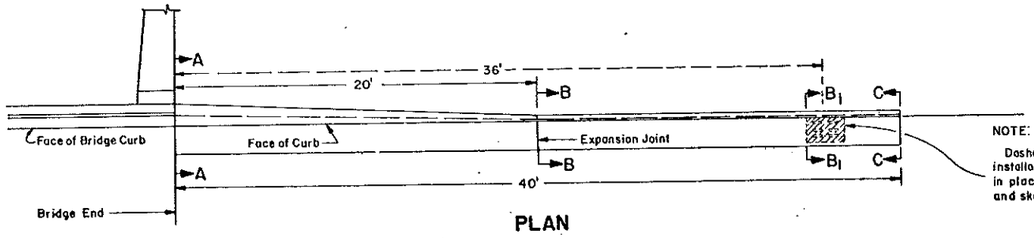
COMBINED CONCRETE CURB & GUTTER FOR BRIDGE APPROACHES

FED. AID PROJ. NO.	STATE	SHEET NO.	TOTAL SHEETS
	N.D.		

FI-194-4(45) 18



PLAN

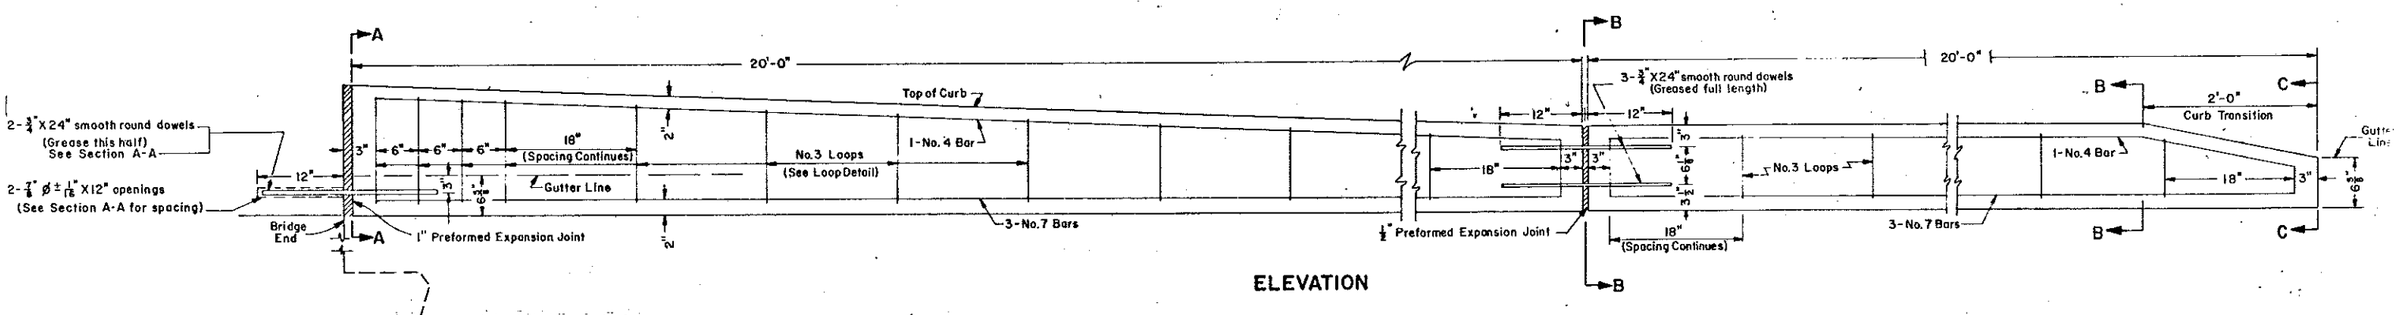
NOTE:
Dashed dimensions and curb inlet apply to installation where required. Where inlets are in place the engineer will verify all dimensions and skew angles before installations.

NOTES:

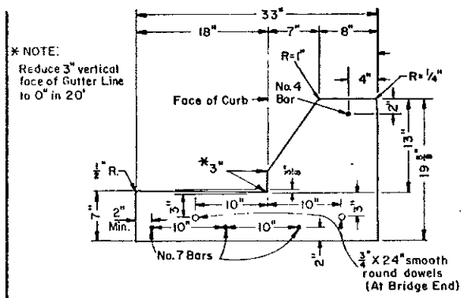
All reinforcing Steel & Dowels shall be included in price bid for Combined Concrete Curb & Gutter.

At locations where bridge and bridge curb are constructed on a skew the end section of Combined Curb & Gutter abutting bridge curb shall be constructed on the skew.

See Standard D-752-3 for detail of curb inlet.



ELEVATION



* NOTE:
Reduce 3" vertical face of Gutter Line to 0" in 20'

CORRUGATED STEEL PIPE CULVERTS AND END SECTIONS

(ROUND PIPE)

NOTES:

Pipe and Connecting Bands shall conform to applicable sections of the NDSHD Standard Specifications and to AASHO M-36.

Top edge of all End Sections to have tubing reinforcement or rolled tubed reinforcement (See Section A-A). The tubing is to be supplemented with 2"x2"x 1/4" Galv. Angle for 60" thru 72" Dia. and 2½"x2½"x¼" Galv. Angle for 78" and 84" Dia. Angles to be attached by Gal. 3/8" Ø bolts and nuts. Angles are to extend from Pipe to the corner wing bend.

Elongated pipe shall be factory preformed so that the vertical diameter shall be 5% greater and the horizontal diameter 5% less than a circular pipe.

Fill Height Tables are based on the following criteria:

1. Embankment weight = 120 lb/ft^3
2. Max. pipe deflection = 5%
3. Bedding - Class C
4. Compaction = 95% Proctor Density
5. Modulus of passive soil resistance (E') = 1400 psi
6. H-20 Live Load

This connection for 42" thru 84" diameter pipe to be bolted or riveted to the end section with 3/8" Galv. bolts or rivets.

* These sizes have 0.138 in. center panels.
** Pipe diameter is equal to dimension "D" of end section.
Manufacturers tolerances of above dimensions will be allowed.
Splices to be the lap riveted type.
Multiple panel bodies shall have lap seams which are to be tightly joined with 3/8" Ø galv. bolts or rivets. Nuts to be torqued to 25 lbs. ±.

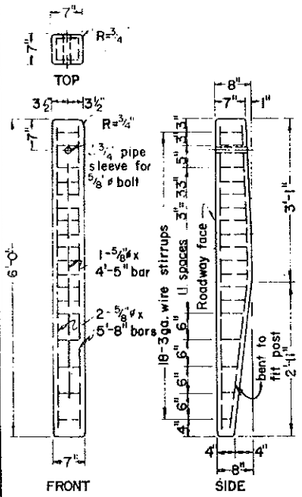
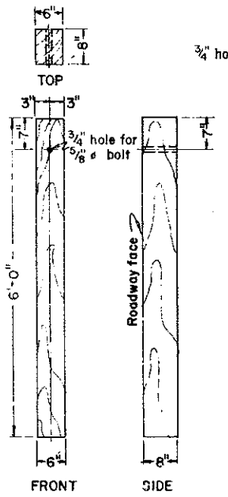
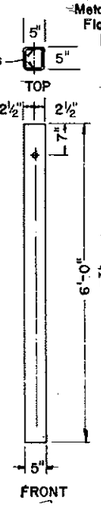
BEAM GUARD RAIL GENERAL DETAILS

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	FI-194-4(45)000	51
		D-722-1	

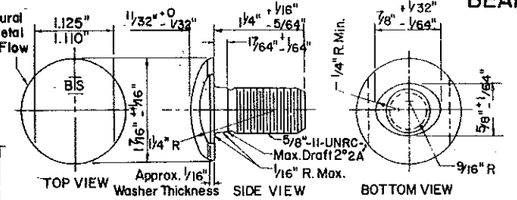


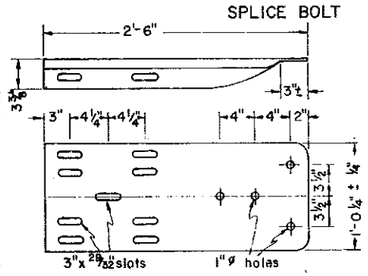


WOOD POST

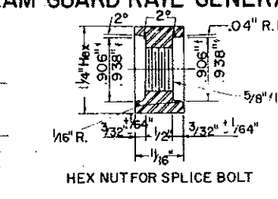


STEEL POST
11.86 lbs/ft.

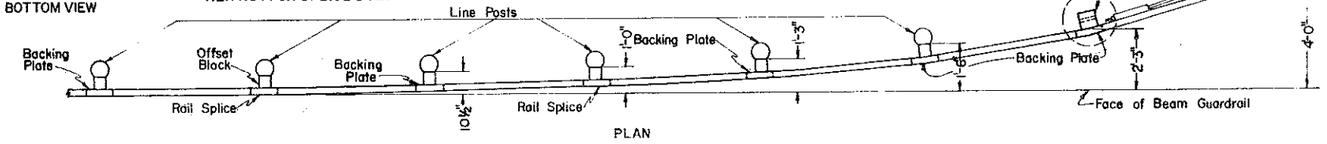


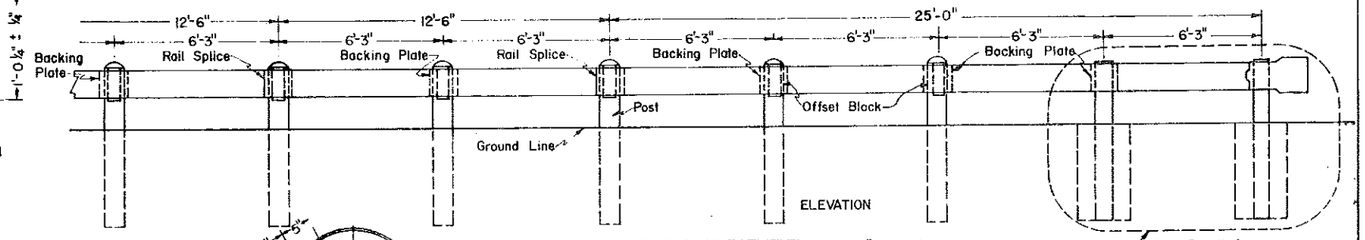


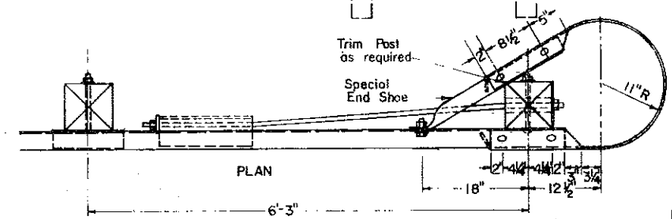
SPECIAL END SHOE
End to be shaped to fit the Standard Rail Section and fabricated from the same material except it shall be 10 Gauge.



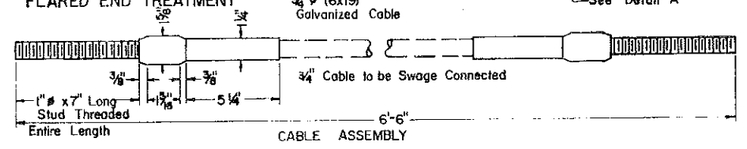
NOTES: 8 Bolts in regular joint bolt pattern, tested in shear with two 10 ga. plates shall withstand a load of 100,000 lbs. without failing. Bolts will have Tensile Strength of 70,000 lbs./sq.in. Bolts roll threaded Class 2A Fit before Galvanizing. Nuts tapped oversize after Galvanizing. Galvanize per A.S.T.M. A-153

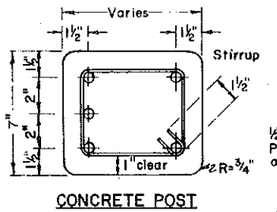




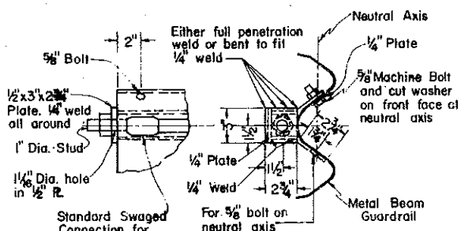


FLARED END TREATMENT

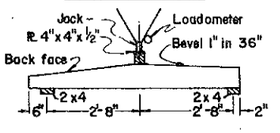




CONCRETE POST

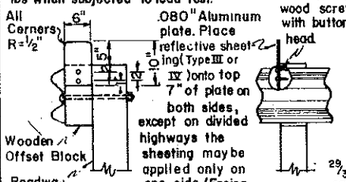


ANCHOR PLATE DETAIL



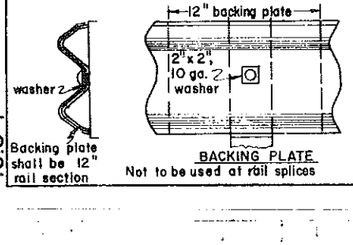
TRANSVERSE LOAD TEST
(Concrete Posts)

Note.
All posts shall sustain a load of 5,800 lbs or more without visible cracking and an ultimate load of not less than 13,000 lbs when subjected to load test.

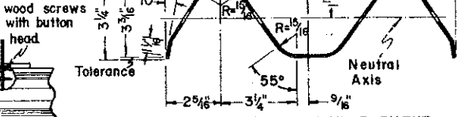


REFLECTORIZED PLATE DETAIL

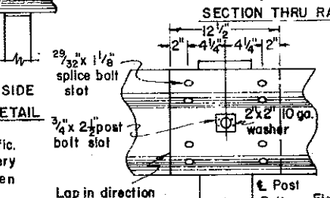
Note:
Always face reflective plate toward traffic. Reflectorized plate shall be placed every 12'-6" unless length exceeds 200', then the spacing shall be 25'-0".

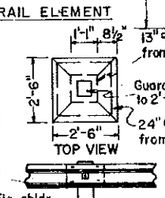


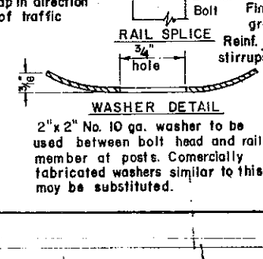
BACKING PLATE
Not to be used at rail splices



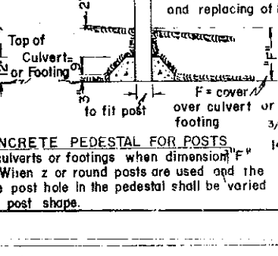
SECTION THRU RAIL ELEMENT



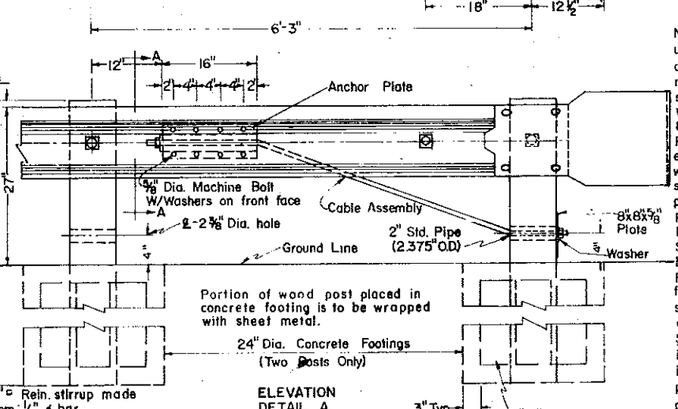




WASHER DETAIL
2"x 2" No. 10 ga. washer to be used between bolt head and rail member at posts. Comercially fabricated washers similar to this may be substituted.

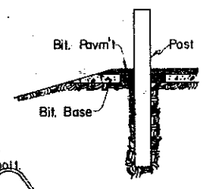


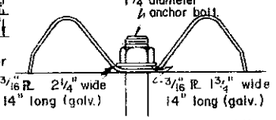
DETAIL OF CONCRETE PEDESTAL FOR POSTS
To be used over culverts or footings when dimension "F" is less than 3'-8" When z or round posts are used and the pedestal is required the post hole in the pedestal shall be varied as required by the post shape.



MANNER OF REPLACING BIT. MATERIAL AT GUARD RAIL POST

Note. All excess earth from excavations for guard posts shall be disposed of as directed by the Engineer. Replace Bit. material where ever guard rail is installed after mat has been laid. Cost of excavation and replacing of Bit. material to be included in the price bid for other items.





RAIL ANCHOR BOLT DETAIL
for bolting directly to rail

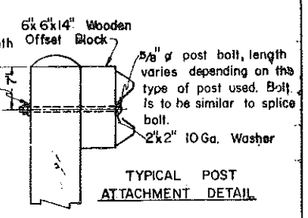
NOTE: WOOD POST: 8"-9 1/2" diam. (± 1/4") round post may be used as an alternate to 6"x8" rectangular post shown on the drawings. Oversized posts may be approved by the engineer. The max. difference in diameter between the smallest and the largest shall be 2 inches. Wood Posts shall conform to Section 850-4 with the following exceptions. Treatment shall conform to Section 866. Timber preservative shall conform to Section 866. Post treated with creasote or pentachlorophenol shall not be painted. Posts treated with water borne preservative shall be painted with three coats of paint. The first coat shall be a prime. The second and third coats shall be white or aluminum. All posts on the project shall have the same treatment. Treated Wood Guard Rail Posts shall have an allowable unit working fibre stress in bending of 1400 psi or more as determined from Section 1.10.1 of the AASHO Standard Specifications for Highway Bridges. Round Posts shall be notched to receive wooden offset block prior to treatment. Flat surface shall be 5"-6" wide and 14"-15" long or extending the full length of the post. Minimum width of post after notching shall be 6 3/4 inches. Round posts may have domed top in lieu of flat top as shown for 6x8 rectangular post.

STEEL POSTS: The steel posts shall conform to ASTM designation A-36 and shall be galvanized after fabrication according to the requirements of AASHO designation M-111, hot dip process, (ASTM designation A-123). In lieu of square steel post a steel Z post may be used weighing 8.64 #/L F. Moment of Inertia 17.06 in.^{4}, Section Modulus 5.10 in.^{3}, 3/16" thick open hearth, low carbon, Hot Rolled Steel. Coating shall be the same as squaresteel posts.

CONCRETE POSTS: Stirrups shall be tack welded or wrapped around each bar. Wire for stirrups shall conform to the requirements for "Cold Drawn Steel Wire for Concrete Reinforcement" AASHO designation M-32 or the latest revisions. Pipe sleeves may be aluminum or steel standard galvanized pipe. If standard pipe is used galvanizing shall be done after cutting to proper length.

CONTRACTORS OPTION: Wood, Concrete or Steel Posts and Aluminum or Steel Beam Guard Rail. Aluminum Guard Rail shall conform to the following ASTM Specs; Rail-B209 alloy clad 2024-T3; Bolts-B211 alloy 2024-T4 with at least 0.0002 inches of anodic coating and chrome seal; Nuts-B211 alloy 6061-T6.

NOTE: The contractor may substitute a rod type assembly with a minimum breaking strength as specified below and galvanized.



CONCRETE: Class AE Concrete shall be used. Course Aggregate for Class AE Concrete shall be Class 1, 3, 4 or 5 at the option of the Contractor.

WOOD OFFSET BLOCKS: The material requirements, Paint & Treatment for Wood Offset Blocks shall be the same as for Wooden Posts.

STEEL BEAM GUARD RAIL: Steel Beam Guard Rail shall conform to the requirements of AASHO M-180 Class A, Type 1.

ALUMINUM BEAM GUARD RAIL: Aluminum Beam Guard Rail shall be 0.156" nominal thickness.

END TREATMENT: The contractor shall have no option for the type of posts to be used in the construction of the end unit. The End Plates shall be galvanized steel fabricated of the same material as the Steel Rail. The Anchor Plate and Washer Plate shall be fabricated from Steel conforming to ASTM A 36 and galvanized after fabrication. The Cable Assembly shall be fabricated with a minimum breaking strength of 40,000 lbs. and shall be galvanized. Cost of End Plates, End Shoes, Anchor Plates, Cable Assembly and other hardware required to fabricate and assemble the End Treatment Unit shall be included in the price bid for Beam Guard Rail including concrete and Reinforcing Bars.

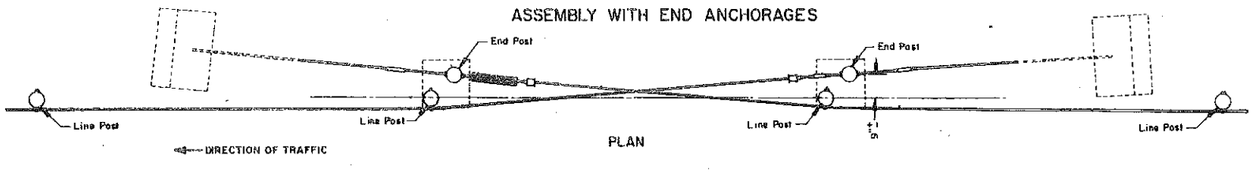
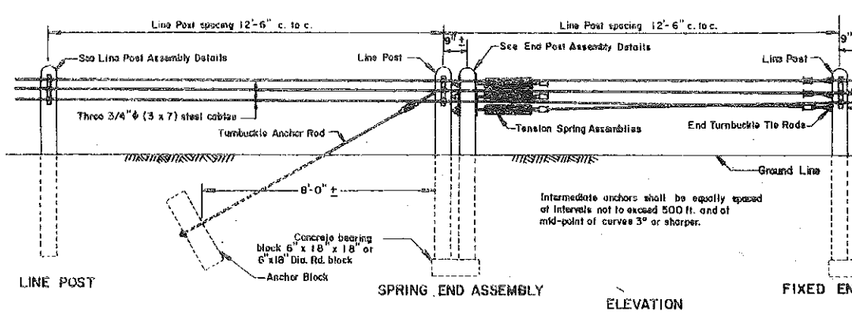
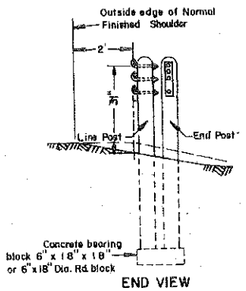
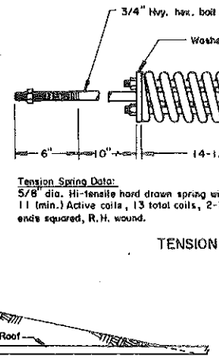
ASSEMBLY WITH END ANCHORAGES

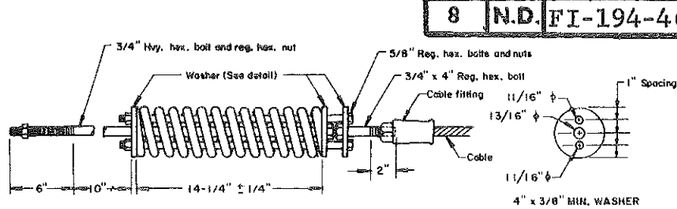


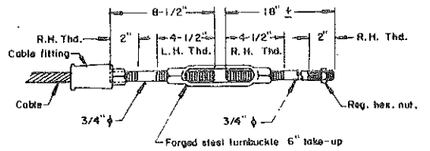


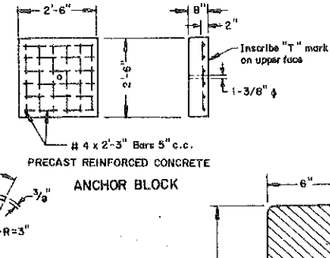


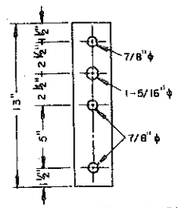
ASSEMBLY WITH INTERMEDIATE ANCHORAGES

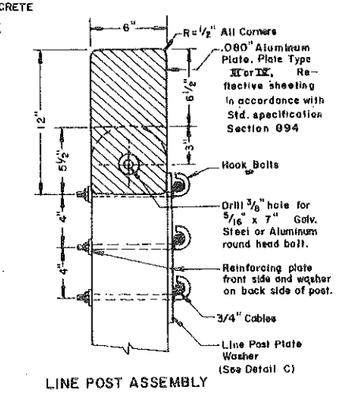


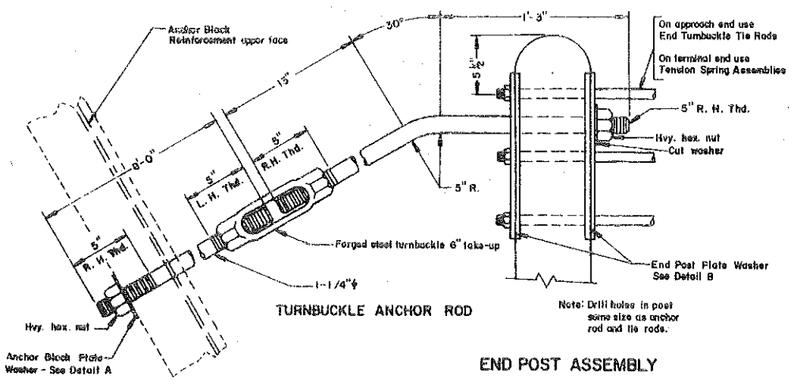


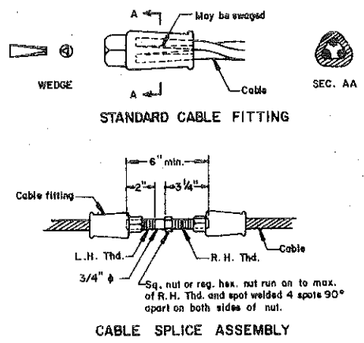


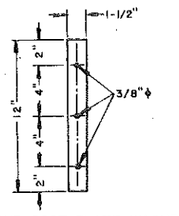


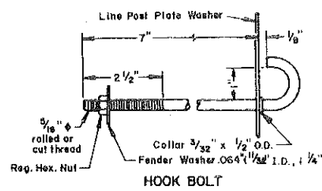












NOTES:
WOOD POSTS: All posts shall be 5½" nominal (4¾" to 6¼") round by 6'-0" treated timber and shall conform to Section 850-4 with the following exceptions. Treatment shall conform to Section 866. Timber preservative shall conform to section 866. Posts treated with creosote or pentachlorophenal shall not be painted. Posts treated with water borne preservative shall be painted with three coats of paint. The first coat shall be primer, the second and third coats shall be aluminum or white. All posts shall have the same treatment.

Treated wood guard rail posts shall have an allowable unit working fibre stress in bending of 1400 PSI or more as determined from Section 1.10.1 of the AASHO Standard Specifications for Highway Bridges.

BEARING BLOCKS: Bearing blocks may be precast or cast in place. Class A concrete shall be used. Coarse aggregate for the Class A concrete shall be Class 1,3,4 or 5 at the option of the Engineer.

REFLECTOR PLATES: Reflector plates shall be installed on all posts except end posts.

Reflectorplates to be included in price bid for Three Cable Guard Rail.

THE INTERMEDIATE ANCHORAGE ASSEMBLIES SHALL NOT BE INCLUDED IN PAY LENGTH, BUT SHALL BE INCLUDED IN THE PRICE BID FOR THREE CABLE GUARD RAIL. THE INTERMEDIATE ANCHORAGE ASSEMBLY SHALL INCLUDE END POSTS, TENSION SPRING ASSEMBLIES, END POST ASSEMBLIES, ANCHOR BLOCK AND OTHER EQUIPMENT NEEDED FOR ASSEMBLY.

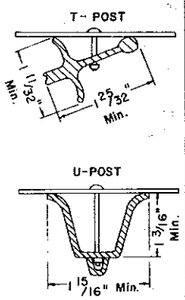
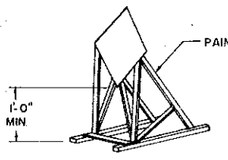
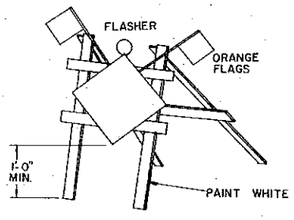
AND POST MOUNTING DETAILS





PORTABLE SIGN MOUNTING



PORTABLE SIGN MOUNTING

NOTES:

DELINEATOR POSTS: Typical fence post sections are shown in Attachment Details. Other types of metal fence posts may be substituted upon approval of the engineer. These substituted posts shall have reflectors attached similar to the ones shown.

BARRICADE MOUNTING SIGNS: The bottom of the sign shall be flush with the top of the top rail. Wood sign posts shall be 4x4 min. SFS or equivalent steel posts. See Stds. D-754-5 thru D-754-9 for construction sign and barricade location details. All barricades and barricade mounted signs shall be assembled with 3/8" bolts.

SIGN SUPPORTS: The sign supports shall be imbeded to a sufficient depth so that the signs will remain plumb throughout duration of the project. It is suggested that the min. depth of imbedment be 5'-0".

MATERIAL: All signs shall be .100" aluminum, 12 gage galv. steel, 1/2" plywood or other approved mat'l.

HOLES: All holes to be punched round for 3/8" bolts.

ALTERNAL MESSAGES: The signs that have alternate messages may have these alternate messages placed on a reflectorized plate without a border and this plate installed and removed as required.

CONSTRUCTION SIGN AND BARRICADE LOCATION DETAILS

Lighting - The flashers and steady burn lights shall be maintained as shown. If the danger exists at night and the work area is close to the traffic lane, the edge of the traffic lane on the work area side shall be illuminated by steady burn lights spaced at 100 ft. centers. The flashers shall be placed at the beginning and middle of the hazard. Where traffic is tapered into another lane, the flashers shall be placed at the beginning and middle of the taper, and the remaining tapering devices shall be illuminated by steady burn lights. The steady burn light shall be spaced at the dimension S used in calculating length of tapes. Flashers shall be placed above the barricade bars and above all warning signs unless barricades and signs have encapsulated lens reflective faced.

FLAGS: All advance warning signs shall have two orange warning flags 24" square mounted perpendicular to the edges of the diamond sign and at such a distance above the edges so that when flag is hung limp it will not touch the sign.

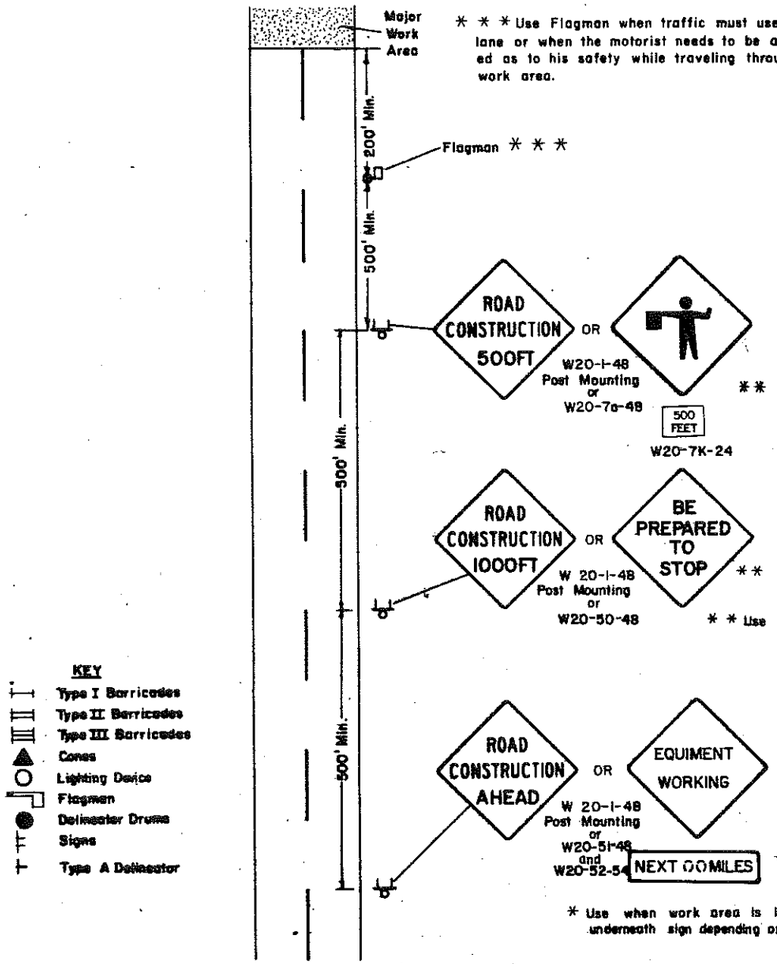
Delineator Drums, Barricades or cones used for tapering traffic shall be spaced at the demention "S".

"S" = Numerical value of speed limit or 85 percentile speed

Where advance warning sign placed as shown interferes with permanent signs, The warning sign location shall be determined by the Engineer for best results. Messages shall be varied as required.

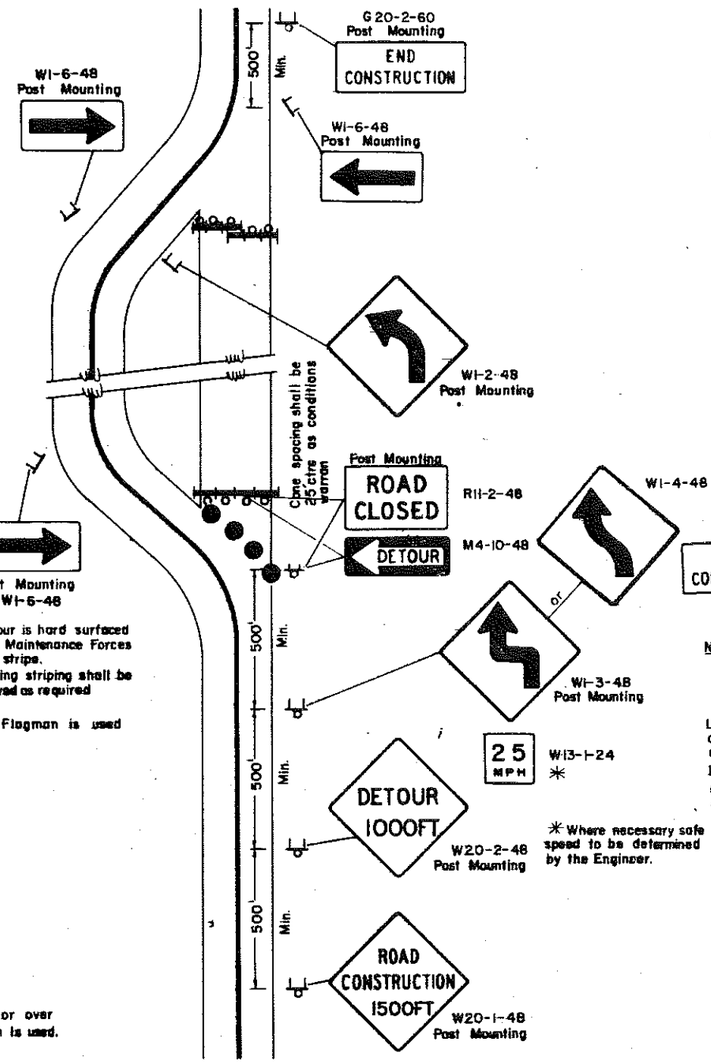
Mounting - Barricade shown to be placed on roadway shall be on a movable Assembly. Sign to be mounted on barricades shall be mounted with the sign bottom on the top of the top barricade bar intermediate Sign shall be on a movable assembly Sign show to be placed on roadway shall be placed on movable assemblies.

* * * Use Flagman when traffic must use one lane or when the motorist needs to be advised as to his safety while traveling through work area.

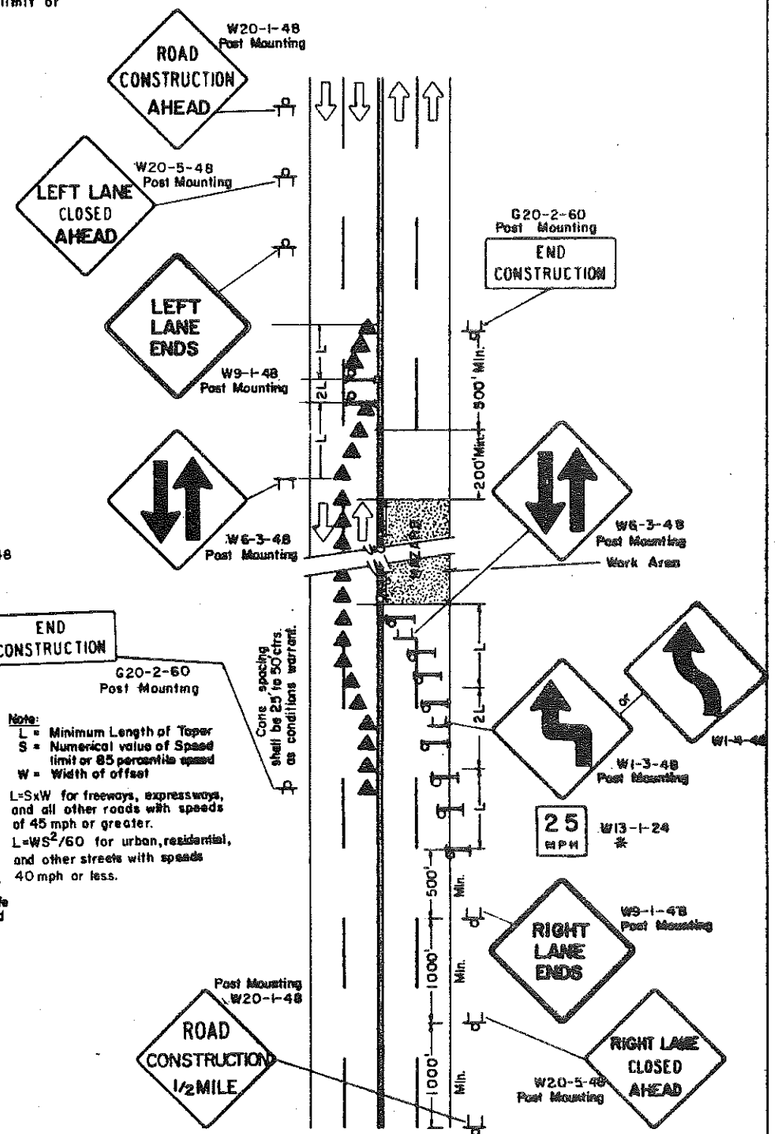


TYPE A
CONSTRUCTION SIGN LAYOUT
2 & 4 Lane Highway when traffic is maintained.
(Sign shown for one end only)
MAJOR WORK AREA
(shall be limited to 3 miles)

When the work area is left overnight the necessary warning signs shall remain and others added reflecting the conditions in the work area. Speed limit signs and advisory speed plates shall be added as needed.



TYPE B
CONSTRUCTION SIGN LAYOUT
2 Lane Highway where roadway is closed and detour is provided.
(Sign shown for one direction of travel only).
Longer than one day or outside of Major Work Area



Note:
L = Minimum Length of Taper
S = Numerical value of Speed limit or 85 percentile speed
W = Width of offset

L=SxW for freeways, expressways, and all other roads with speeds of 45 mph or greater.
$L=WS^2/60$ for urban, residential, and other streets with speeds 40 mph or less.

* Where necessary safe speed to be determined by the Engineer.

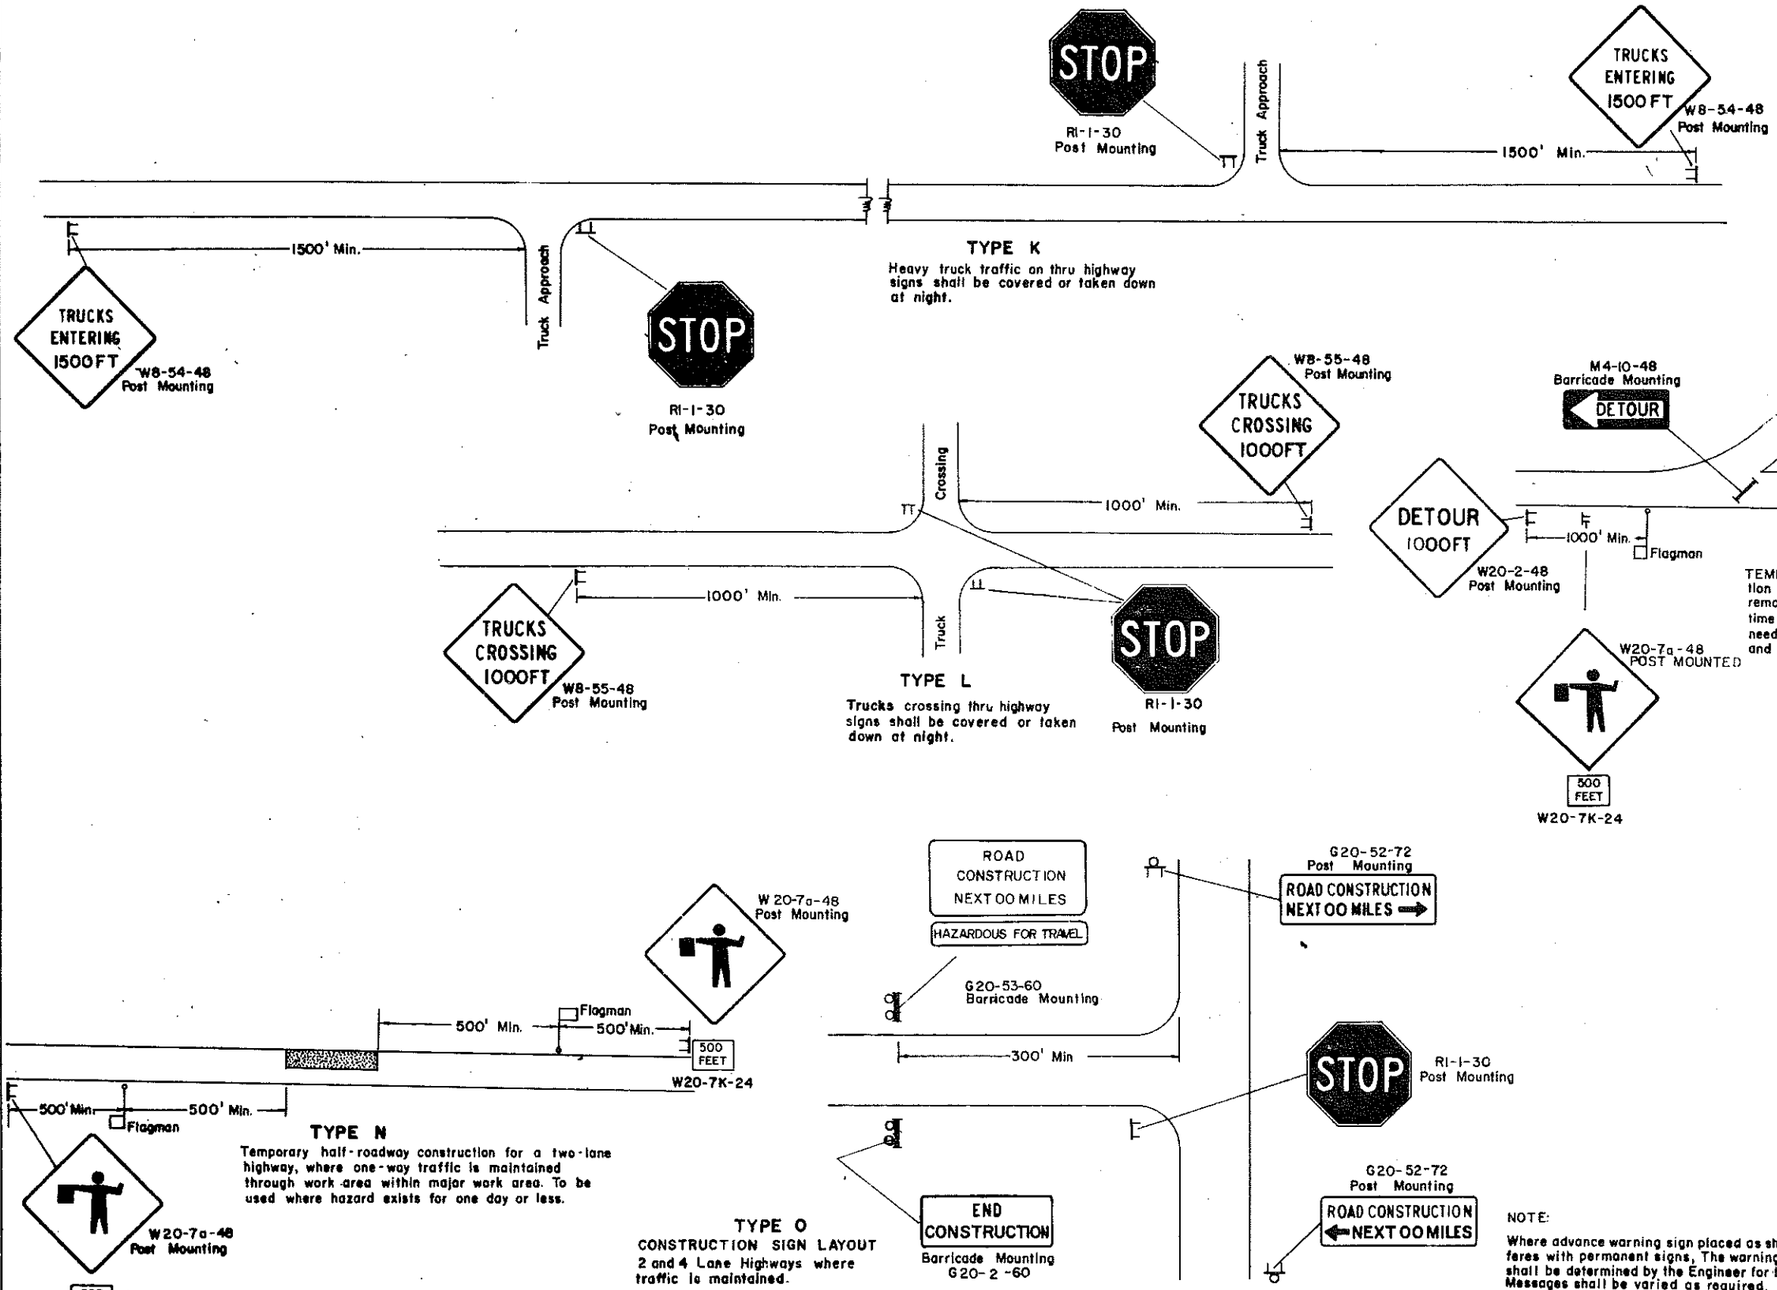
D-754-10



Lighting - The flashers and steady burn lights shall be maintained as shown. If the danger exists at night and the work area is close to the traffic lane, the edge of the traffic lane on the work area side shall be illuminated by steady burn lights spaced at 100 ft. centers. The flashers shall be placed at the beginning and middle of the hazard. Where traffic is tapered into another lane, the flashers shall be placed at the beginning and middle of the taper, and the remaining tapering devices shall be illuminated by steady burn lights. The steady burn lamps shall be spaced at the dimension S used in calculating length of taper. Flashers shall be placed above the barricade bars and above all warning signs unless barricades and signs have encapsulated lens reflective sheeted faces.

Mounting - Barricade shown to be placed on roadway shall be on a movable Assembly. Sign to be mounted on barricades shall be mounted with the sign bottom on the top of the top barricade bar Intermediate Sign shall be on a movable assembly Sign show to be placed on roadway shall be placed on movable assemblies.

NOTE:

Where advance warning sign placed as shown interferes with permanent signs, The warning sign location shall be determined by the Engineer for best results. Messages shall be varied as required.

FLAGS: All advance warning signs shall have two orange warning flags 24" square mounted perpendicular to the edges of the diamond sign and at such a distance above the edges so that when flag is hung limp it will not touch the sign.

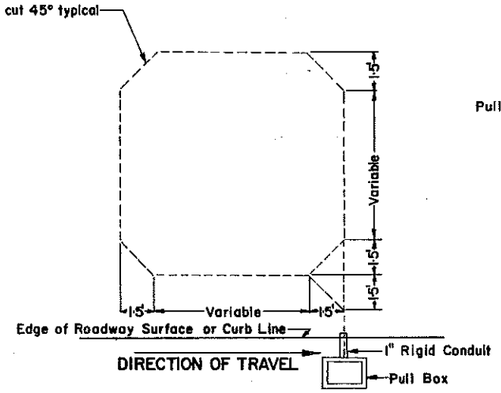
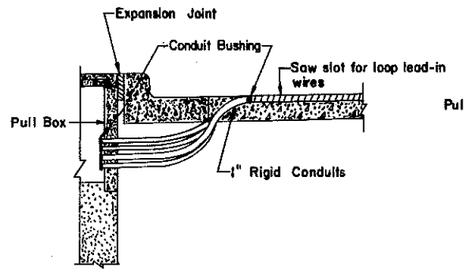
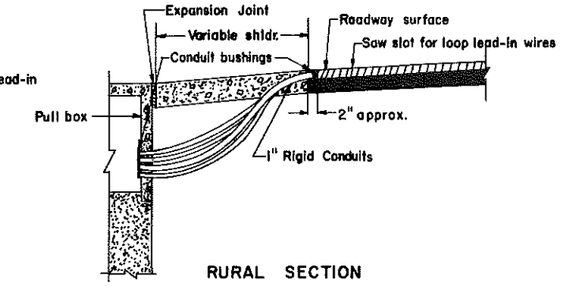
MULTIPLE LOOP DETECTOR DETAIL



LOOP DETECTOR DETAIL

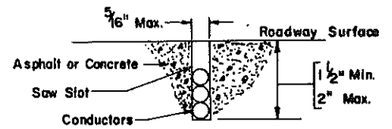


CURB SECTION

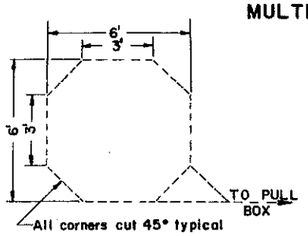


RURAL SECTION

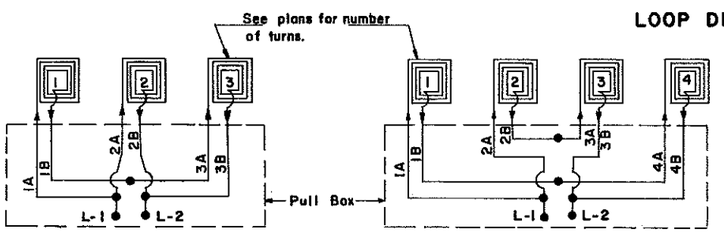
SAW SLOT TO PULL BOX DE TAILS



SAW SLOT DETAIL



TYPICAL MULTIPLE LOOP DIMENSIONS



MULTIPLE LOOP CONNECTION

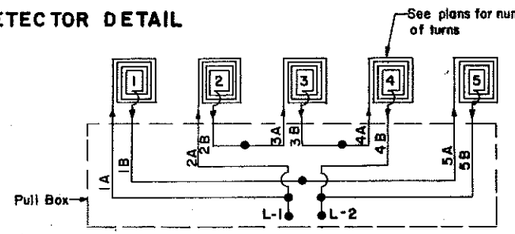
All conductors shall be labeled in the pull box as shown. (1A, 1B, 2A, etc.)

The loop connections shall be spliced in the pull box: 1B to 3A, 1A and 2A to L-1, 2B and 3B to L-2.

MULTIPLE LOOP CONNECTION

All conductors shall be labeled in the pull box as shown. (1A, 1B, 2A, etc.)

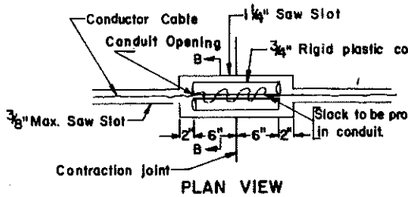
The loop connections shall be spliced in the pull box: 1B to 4A, 2B to 3A, 1A and 2A to L-1, 3B and 4B to L-2.



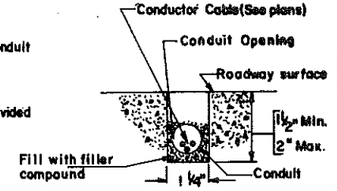
MULTIPLE LOOP CONNECTION

All conductors shall be labeled in the pull box as shown. (1A, 1B, 2A, etc.)

The loop connections shall be spliced in the pull box: 1B to 5A, 2B to 3A, 3B to 4A, 1A and 2A to L-1, 4B and 5B to L-2.



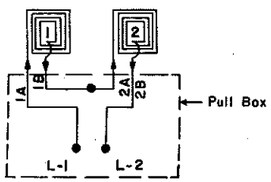
PLAN VIEW



SECTION BB

CONTRACTION JOINT DETAIL

(This detail shall also be used whenever a crack in the roadway is encountered.)



MULTIPLE LOOP CONNECTION

All conductors shall be labeled in the pull box as shown. (1A, 1B, 2A, etc.)

The loop connections shall be spliced in the pull box: 1A to L1, 1B to 2A, and 2B to L2.

NOTES:

1. Each loop shall be saw cut in the roadway.
2. The number of turns, size of loop and size of conductor shall be as shown on the plans. The first loop dimension figure is the length in the direction of travel and the second dimension is the width across the traffic lane.
3. The loop conductor shall be pushed into the saw slot with a blunt stick to avoid damaging the conductor insulation.
4. The loop conductor shall be one continuous length of conductor from the nearest pull box around the loop and back.
5. The loop lead-in conductor shall be continuous from the detector sensor unit to the nearest pull box by the sensing loop.
6. The resistance of the loop conductor to ground shall be checked before the roadway loop is sealed in place. A resistance of less than 10 megohms will indicate a fault requiring correction.
7. Saw cuts in concrete shall be filled with an asphaltic joint sealer or microcement as approved by the engineer.
8. Saw cuts in bituminous shall be filled with an approved filler compound, asphaltic joint sealer or preformed contraction joint seal as approved by the engineer.
9. A thin layer of filler material shall be placed on the bottom of the saw cut before the conductor is installed.
10. All exposed filler compound shall be covered with a layer of fine sand.
11. The loop wire from the loop to the pull box must be twisted two to five times per foot. The loop shall be wound in the same direction as adjacent loops of a multiple loop installation. The lead routing shall be in seperate slots to conduit leading to pull box to minimize interaction. The loop lead-in to loop splice shall be soldered (rasine core only) and wrapped with a high grade PVC or equivalent plastic tape and coated with sealant such as scotchkote. Consult detector manufactures recommendations for other installation details.
