TABLE OF CONTENTS

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	BRF-1-006(02)066	2

GENERAL NOTES

100 011 GENERAL: The engineer will attend to the removal of existing fences to the highway right of way line and to the relocation or adjustment of utility facilities as shown on the plans. Equipment shall work around utility poles, within the area, that are not to be disturbed.

100 030 UNDERGROUND UTILITIES: The contractor shall notify the local utility companies prior to the beginning of construction, so they may stake location and depth of all utilities in the project area. Subcutting or scarifying over utility lines may be eliminated if, in the opinion of the engineer, a hazardous situation exists. Separate plans, if any, showing relocation or adjustment work to be performed by utility companies to accommodate highway construction will be made available to the contractor, upon request to the engineer.

100 050 PROJECT ENGINEER RESPONSIBILITY:

(a) USC & G Bench Mark
As soon as it has been determined that a bench mark must be moved, consult your Construction Survey Manual (Sec. 150-4.9), for the proper steps needed to preserve the bench mark.

(b) All section corners must be monumented and a corner recordation form must be filed with the County Register of Deeds. See Appendix G of the Preliminary Survey Manual for instructions on how to fill out the form.

100 060 DETOURS: The contractor shall maintain the streets used as detours (streets to be designated by the engineer) and repair areas damaged by the detoured traffic. Upon completion of the project, the contractor shall restore the streets to a condition at least equal to that which existed at the time traffic was routed over them. Work shall be as deemed necessary by the engineer. The repair and maintenance of the detours will be paid for in accordance with SP-532 "Haul Road Maintenance." Necessary route markers will be furnished by the State Highway Department and erected and maintained by the contractor as an incidental item.

100 068 CONCRETE PROTECTION: Adjacent concrete shall be protected during the application of all bituminous and asphalt materials to prevent any discoloration of the concrete. Failure to comply will result in the contractor having to clean the concrete at his own expense.

100 120 Excavate, if necessary, where the new surfacing meets existing pavement, bridge ends, or railroad crossings to allow placement of the full depth of the surfacing course. The excavation is not a pay item but shall be considered incidental to other items.

100 130 TREES, SHRUBS, AND NATIVE GRASSES: The contractor shall exercise care in his construction operations to ensure that trees, shrubs, and native grasses within the right of way and outside the construction area are disturbed as little as possible.

100 133 The contractor will be required to conduct the construction activities in such a manner as to comply with the Air Pollution Control Regulations of the state of North Dakota. Water will be used to control dust on the construction site.

100 140 HISTORICAL INFORMATION: If any scientific or historical information is encountered after construction is in progress, the Highway Department will immediately notify the Historical Society, and efforts will be made to protect the material until it has been examined by an archaeologist from the Historical Society. If future activities should result in the discovery of any cultural resources that are eligible for inclusion in the National Register of Historical Places, this will require compliance with Section 106 of the National Historic Preservation Act of 1966 and the Advisory Council on Historic Preservation "Procedures for the Protection of Historic and Cultural Properties" (36, CRF, Part 800).

100 160 UTILITY POLES: Equipment shall work around utility poles within the construction area that are not to be disturbed.

100 161 POLE LINES: Pole lines (power, telephone, etc.) interfering with construction of this project shall be removed or relocated by the utility companies.

200 010 SHRINKAGE: 25 percent additional volume in yardage computed by the end area method is allowed for shrinkage in earth embankment.

200 021 COMPACTION AND DENSITY CONTROL: Compaction and density controls shall be in accordance with Section 203-2.3.3 of the Standard Specifications, except that, if the subgrade is unstable (as evidenced by sponginess or rutting) when compacted to the required density, it will be necessary to dry the soils to obtain adequate stability. This may require drying below optimum moisture. The cost of such drying will be incidental to the price bid for "Common Excavation" (and/or "Borrow," if used).

200 290 INTERCEPTING DITCH: Intercepting ditches shall be constructed wherever considered necessary by the engineer.

200 250 WASTE EXCAVATION DISPOSAL: Disposal sites selected by the contractor shall be approved by the engineer. Disposal in wetland areas will not be approved.

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	BRS-1-006(02)066	4

GENERAL NOTES

300 020 AGGREGATE BASE COURSE: The Class 11 material (clay binder) shall be weighed and paid for by the ton prior to blending this material with the aggregate base material at the plant site. No deduction in weight will be made for the Class 11 material at the time of weighing the aggregate base (Class 8) material for payment. The Class 11 material can be omitted by the Engineer if not required.

400 010 PRIME, FOG, OR TACK COAT: When directed by the engineer, emulsified asphalt for prime, fog, or tack coat shall be diluted with water prior to application in a 50-50 ratio or other approved proportions. Cost of water shall be included in the price bid for "Emulsified Asphalt for Prime, Fog, or Tack Coat."

400 028 HOT BITUMINOUS PAVEMENT: The contractor's operations shall be such that no segregation of the aggregate or hot mixed materials will occur. Any hot mix placed on road which has segregated shall be removed and replaced, with approved material, at the contractor's expense.

400 040 HOT BITUMINOUS PAVEMENT: The temperature of the mix at laydown shall not be less than 225°F, if the air temperature is above 60°F, and shall not be less than 240°F if the air temperature is below 60°F. The actual mixing temperature shall be adjusted as directed by the engineer within the allowable limitations to best suit construction conditions.

400 070 DIMENSIONS: Thicknesses shown on the typical sections for surfacing are approximate. It is intended that the plan tonnages provided for by the basis of estimate will be used uniformly throughout the project unless otherwise authorized by the engineer.

400 120 COMPACTION OF HOT BITUMINOUS PAVEMENT: The compaction equipment for mainline paving shall include not less than one approved steel roller or approved vibratory roller and one approved pneumatic tired roller. The specified density shall be obtained before the mat temperature drops below 170°F. The maximum speed of vibratory roller in the vibratory mode shall be 3 mph. The speed of nonvibratory rollers and vibratory rollers in the static mode shall not exceed 4 mph during initial and intermediate rolling prior to obtaining the required density.

406 014 BITUMINOUS PAVEMENT SLOUGHS: Bituminous pavement sloughs shall be compacted with rollers capable of providing a smooth finished compacted slough that is free of tire marks and uneveness or dropoff. No density tests will be required.

406 016 HOT BITUMINOUS PAVEMENT: The moisture of the hot bituminous pavement mixture shall not exceed 2 percent.

708 030 CLASS OF CONCRETE: The class of concrete used in the curb and gutter, sidewalks, and driveways shall be Class AE. The contractor shall have the option of using aggregate, Size No. 1, 3, 4, or 5 as defined in Section 806-2 of the Standard Specifications.

756 010 FIELD LABORATORY: If deemed unnecessary by the engineer in the field, the item "Field Laboratory" shall be delted.

CURB ENDS: Where the new curb and gutter ends, the end four (4) feet of the curb shall be tapered from 10" in height to 0". A 1/2" premolded expansion joint which is full depth and the same shape as the curb and gutter shall be installed just ahead of the taper. An 18" tie bar shall be installed across the joint.

TOPSOIL: 4" of topsoil shall be placed on all areas to be seeded or sodded.

REMOVE 4 CABLE GUARDRAIL AND POSTS: The lengths of 4 cable guardrail shown on the plan to be removed shall have the cable, posts, and end anchors removed. The removed cable, posts, and hardware shall be stockpiled on the right of way in the location designated by the engineer. The stockpiled material shall remain the property of the state. If, in the opinion of the engineer, the concrete end anchors and anchor rod will not interfere with the construction, they may be cut off 1' (one foot) below ground line and surface restored to match the surrounding area. Cost of removing and stockpiling the 4 cable guardrail, posts, and hardware shall be included in the price bid for item; "Remove 4 Cable Guardrail and Posts."

WORK SCHEDULE: The North Dakota State Game and Fish Department (G&F) will monitor the stream to determine water quality conditions both prior to and during construction. The purpose of the monitoring is to determine the effect that construction activities will have on fish spawning. The Contractor must give the Department a minimum of 21 days notice prior to commencing construction. The Department will inform the G&F Department so they can commence monitoring activities. The Contractor will not perform any construction activities that will affect the stream during this 21 day period.

EXISTING SURFACING: The contractor shall have the option of salvaging the existing surfacing for his own use. Should the contractor salvage the existing surfacing and the dirt run is short, he shall replace this material with an equal amount of excavation at his own expense.

FHWA REGION	STATE	FED. AID PROJ NO	SHEET NO
8	N.D.	BRF-1-006(02)066	5

GENERAL NOTES

If the contractor desires to haul across bridge, he will be limited to 60 Ton Gross vehicle with maximum of 30 ton on single axle. Single vehicle on the structure at one time. Approaches maintained to avoid bouncing of vehicle going onto the bridge. Concrete shall obtain a strength of 4000 psi before use.

LOAD LIMITATIONS: The city of Mandan will be posting 19th Street South to limit the vehicular weight thereon, to a maximum of 12,000 pounds per axle (No. 2 Load Restriction).

SEEDING: The following seed mixture will be used on this project.

Percent Pure Live Seed by Weight	Species	Minimum Percent Pure Live Seed (PLS)
32	Western Wheatgrass (Rosanna)	70
26	Thickspike Wheatgrass (Critana)	80
18	Green Needlegrass (Lodorm)	70
14	Little Bluestem (Blaze)	60
10	Switchgrass (NDG-98)	75

The amount of pure live seed to be applied per acre shall be 18 pounds.

SPECIAL PROVISIONS

SEQ. NO.	NAME	SP NO.
272	Fuel Cost Adjustment	SP 272
512	Bidding Requirements and Conditions	SP 102-18
532	Haul Road Maintenance	
000	Training Special Provision	

BASIS OF ESTIMATE

WATER FOR COMPACTION: 10 Gal. per C.Y. of Embankment.
20 Gal. per Ton of Aggregate Base Coarse

SEEDING: Entire right of way except roadbed, sidewalk, and sodded areas.

AGGREGATE BASE COARSE: Class 8 = 1.5 Ton/C.Y. +25%
Class 11 = 10% of Class 8

FHWA REGION	STATE	FED. AID PROJ. NO	SHEET NO.
8	N.D.	BRF-1-006(02)	

100 010 GENERAL: The cost of furnishing and placing preformed expansion joint filler, bar spacers, bar supports, screed chairs, threaded inserts, deck drains, and other miscellaneous items shall be included in the price bid for Class AE-1 and AAE-3 concrete.

100 017 Bearing areas shall be finished true to plan and elevation by grinding, if necessary, before bearing plates are set.

100 020 Dead load deflections have been accounted for in the screed elevations.

208 020 Excavation Class 1, at the abutments, shall extend from the bottom of the footing to the upper limits as shown on the bridge layout drawing.

228 010 BACKFILL: All backfilling shall be done according to Sections 203-2.3.2 and 228 of the Standard Specifications. Select backfill shall not be placed above the elevation of the berm until the superstructure has cured.

602 010 DECK-FINISHING MACHINE: In addition to the requirements of Section 602-3.6.2.2 of the Standard Specifications, the deck-finishing machine shall be self propelled, mounted on wheels which ride on a track, and have one or more power-driven, oscillating, rotating, or vibrating screeds.

602 110 CONCRETE BARRIER RAILING: The concrete barrier shall be formed for a minimum of three contiguous sections. Concrete shall be placed in alternate sections and shall have a curing period of three days between placement of adjacent sections. Provide adequate tie wires on the barrier forms to avoid any shifting during the placement. Form a 3/4" triangular groove at the midpoint of each barrier section. Groove both vertical faces and across the top. At the barrier deflection joints, use nails to hold the preformed joint filler in place. If an approved method of holding the joint filler in alignment is used, the contractor may pour the complete barrier wall at one time.

602 120 If the forms for the barrier railing are held in place by concrete inserts in the deck slab, the inserts shall be removed when the form removal has been completed and the cavities in the deck slab cleaned and filled flush with a nonshrink epoxy mortar approved by the engineer.

602 210 CURING AAE-3 CONCRETE: The method of curing the deck concrete shall be in accordance with Section 602-3.7.2.2. The intent is to place the covering as soon as possible without causing a significant amount of blemish to the surface. Once the covering operation has started, it shall be a continuous operation to keep pace with the finisher. The covered concrete shall be kept continuously moist by a fog spray for five days, and no waterproof material such as polyethylene shall be used to cover the canvas or burlap.

602 220 The concrete shall be protected during the interval between final finishing and placement of the covering with a linseed oil-based emulsion containing at least 50 percent linseed oil and meeting the requirements of AASHTO M-148. The minimum rate of application shall be 200 square feet per gallon. This emulsion shall not be applied to surfaces which are to receive the special surface finish.

602 310 SPECIAL SURFACE FINISH: Special surface finish shall be required for all exposed surfaces of barrier, and exposed edges of slab. The intent of the finish is to provide a uniform color and to provide an aesthetic appearance. All surfaces which are to receive the special surface finish should be cleaned to remove laitance, form oil, fins, etc., and roughened by brushing and sandblasting so that special surface finish material will develop adequate bond to the prepared concrete surface.

602 320 The special surface finish shall be applied in two applications as one of the last items of work and only after the ordinary surface finish and cure period are complete. A spray application of special surface finish is required, and the rate of application for the commercially-packaged mortar shall be as recommended by the manufacturer.

602 330 The method of cure shall be as stated in the Specifications except that liquid membrane curing compounds will not be allowed on surfaces that are to receive the special surface finish.

610 010 CONCRETE: All superstructure concrete shall be Class AAE-3 or AAE-4. Concrete for the substructure shall be Class AE-1, AE-3, or AE-4. The class of concrete paid for will be that class shown on the plans.

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	BRF-1-006(02)	

610 020 Type I or Type II cement may be used.

610 If the depth of the concrete risers between the tops of the 040 girders and the bottom of the deck slab exceed the theoretical dimensions, the additional concrete required shall be furnished at no expense to the state.

610 050 The contractor will be expected to place the slab concrete for one bridge in one continuous operation. Minimum rate of placement shall be 40 cubic yards per hour.

612 010 REINFORCING STEEL: Dimensions for bent bars are given out to out and to tangent intersections unless otherwise noted. Bent bars shall be bent around AC1 standard size pins.

612 020 The bar fabricator shall add a prefix to all bar designations to differentiate between the several parts of the structure.

612 030 The top layer of transverse deck slab reinforcement shall be tied down with wire ties to the shear connectors of the beams. The ties shall be at intervals of five to six feet along the full length of all beams. Two wraps with 14-gauge plastic or epoxy-coated ties shall be used for this purpose.

612 040 All reinforcing steel shall be Grade 60.

616 011 Girder web, flanges, stiffeners, and splice plates are A-572, Grade 50. All other structural steel shall be A-36.

616 015 The girders shall be cambered in the shop as detailed on Drawing 6-066.371-12. The shop camber diagram represents the total rise, in inches, to be cut into the web plates of the girders.

616 020 A minimum of two (2) contiguous beam sections shall be placed in their correct relative positions before drilling the holes for the field splice between those sections. The proper alignment shall be maintained between sections while reaming the holes. Templates shall not be used in lieu of the above shop assembly. Wire rope slings shall not be used to handle the beams; they shall be handled with beam clamps designed for that purpose or other devices approved by the engineer.

616 025 Shear connector on splice plates shall be moved to clear bolt holes.

616 030 Shop-welded connections of diaphragm angles to gusset plates may be used in place of the bolted connections shown. Details shall be shown on shop drawings.

616 035 All field connections shall be made with 7/8 inch diameter, ASTM A325 high-strength bolts.

616 040 Temporary or permanent attachments or devices that are not shown on the plans as part of the structure shall not be welded to the structural steel members during the fabrication and construction process.

616 050 Swedge bolts shall be provided by the steel fabricator, and the cost shall be incidental to the total cost of structural steel.

616 110 STEEL ERECTION: Falsework with provisions for jacking must be provided at all splice points during erections. All splice points in each girder line shall be brought to their proper elevation and supported in this position before the bolts in any of the splices are tightened to the required tension.

622 110 PILING: Piling shall be driven with a steam, air, or diesel hammer with a rated energy and ram weight not less than 32,073 foot-pound-tons, as computed by the formula W (E-10,946) + .586E, where W is the weight of the ram in tons and E is the rated hammer energy as allowed in Section 622 of the Specifications. In no case shall the ram weight be less than 4,000 pounds.

622 115 Test piles shall be driven to a bearing not less than 125% of the design load as determined by the dynamic formula in section 622-3.3.

718 010 PAINT AND PAINTING: Paint shall conform to the Standard Specifications, Section 870-1.1 and 870-1.18. The finish coats shall be red color no. 31302 and shall meet Federal Standard No. 595 colors. The first coat shall be tinted to differentiate it from the second coat. The dry thickness of each finish and spot coat shall not be less than 1.5 mil for any reading. The dry thickness of the shop coat shall not be less than 1.5 mil for any reading.

750 010 LINSEED OIL TREATMENT: Linseed oil treatment shall not be started until all concrete work is completed and the asphalt curb seal is in place. Only one uniform application of .015 gallons per square yard shall be applied to the deck.

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	BRF-1-006(02)	

900 The contractor shall submit the following shop drawings for
010 approval by the bridge engineer before fabrication;

1. Structural steel.

900 The rock berm around pier 3 shall remain. Only that portion
500 interfering with construction of the new pier shall be removed. The rock berm shall be restored to its original shape.

900 The existing structure is a three-span bridge with a clear
510 roadway of 22 feet. The north span is 76' in length and consists of a concrete slab supported by rolled beams. The center span is a 175-foot steel truss with a concrete slab. The south span is a 14-foot concrete slab.

The structural steel is to become the property of the contractor and shall be removed from the site. The concrete shall be broken up and disposed of at a landfill site approved by the engineer.

900 The contractor shall remove the existing bridge in a manner which
515 will minimize the entry of debris into the water course.

900 The telephone conduit and gas line on the existing bridge will be
520 removed by the owners by April 1, 1984.

900 CONDUIT MATERIALS: The contractor shall notify Giles Jantzer
521 (222-7384) a minimum of 72 hours before the conduit is to be delivered to the project by Northwestern Bell Telephone Company.

Installation of conduit by contractor shall be incidental to AAE-3 Concrete.

900 ENVIRONMENTAL PROTECTION: This project has been classified as
400 a categorical exclusion; therefore, the following special conditions, if applicable, must be met.

1. Any discharge of dredged or fill material will not occur in the proximity of a public water supply intake.
2. Any discharge of dredged or fill material will not occur in areas of concentrated shellfish production, unless the discharge is directly related to a shellfish harvesting activity.
3. The activity will not jeopardize a threatened or endangered species as identified under the Endangered Species Act, or destroy or adversely modify the critical habitat of such species. In the case of federal agencies, it is the agency's responsibility to review its activities to determine if the action "may affect" any listed species or critical habitat. If so, the federal agency must consult with the Fish and Wildlife Service and/or National Marine Fisheries Service.
4. The activity will not significantly disrupt the movement of those species of aquatic life indigenous to the waterbody (unless the primary purpose of the fill is to impound water).
5. Any discharge of dredged or fill material will consist of suitable material free from toxic pollutants (see Section 307 of Clean Water Act) in toxic amounts.
6. Any structure or fill authorized will be properly maintained.
7. The activity will not occur in a component of the National Wild and Scenic River System.
8. The activity will not cause an unacceptable interference with navigation.
9. The best management practices listed below shall be followed to the maximum extent practicable.

CORRUGATED STEEL PIPE CULVERTS AND END SECTIONS

(ROUND PIPE)

NOTES:

Pipe and Connecting Bands shall conform to applicable sections of I'DSHD Standard Specifications and to AASHO M-36.

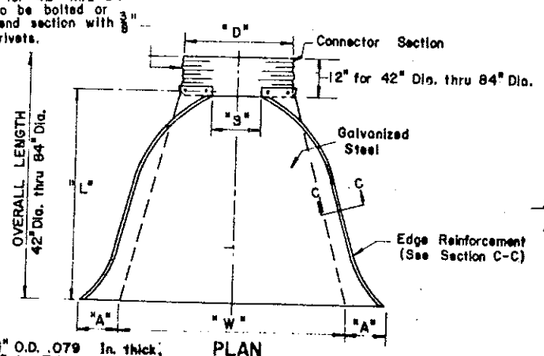
Top edge of all End Sections to have tubing reinforcement or rolled tubed reinforcement (See Section A-A). The tubing is to be supplemented with 2"x2"x 1/8" Galv. Angle for 30" thru 72" Dia. and 2 1/2"x2 1/2"x 1/8" Galv. Angle for 78" and 84" Dia. Angles to be attached by Gal. 3/8 Ø bolts and nuts. Angles are to extend from Pipe to the corner wing bend.

Elongated pipe shall be factory preformed so that the vertical diameter shall be 5% greater and the horizontal diameter 5% less than a circular pipe.

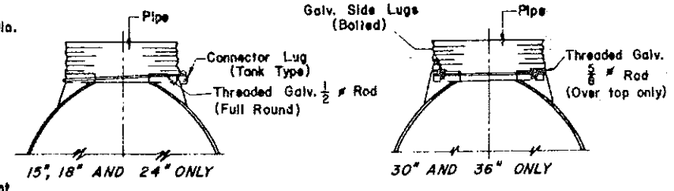
Fill Height Tables are based on the following criteria:

1. Embankment weight = 120 lb/ft³
2. Max. pipe deflection = 5%
3. Bedding - Class C
4. Compaction = 95% Proctor Density
5. Modulus of passive soil resistance (E') = 1400 psi
6. H-20 Live Load

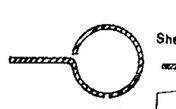
This connection for 42" thru 84" diameter pipe to be bolted or riveted to the end section with 3/8" Galv. bolts or rivets.

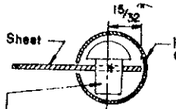


PLAN



ROD CONNECTION DETAILS

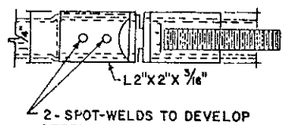


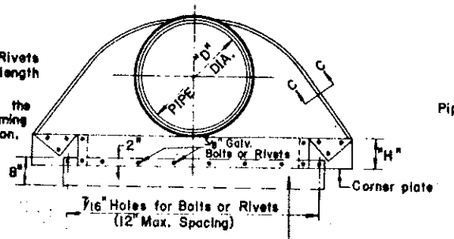


3/8" x 1/2" Galv. Buttonhead Rivets spaced 6" C. to C. Overall length of rivets = 0.78".

NOTE: Tubing is slipped over the sheet and rivets prior to forming operations of the End Section.

SECTION C-C

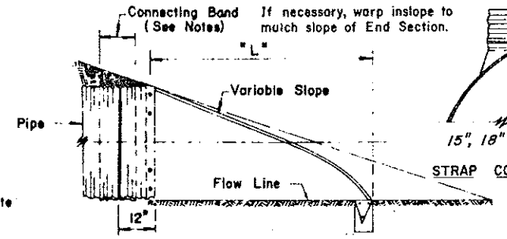




ELEVATION

Galv. Toe Plate required on End Sections for pipe of 30" dia. or larger. Plate to be fastened to End Section in field. Thickness of Toe Plate to be same as End Section.

Where Toe Plate is needed the Toe Plate, Bolts and Nuts are to be included in price bid for End Sections.



TYPICAL CROSS-SECTION

(Showing Connector Section)

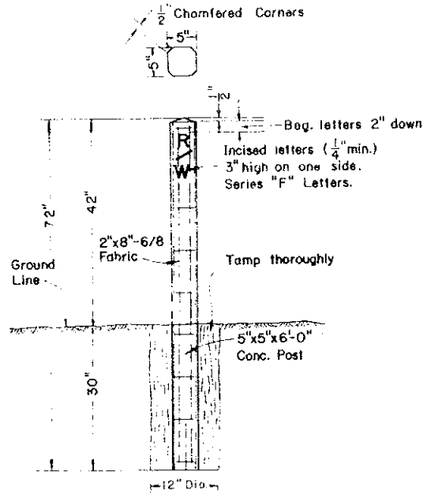
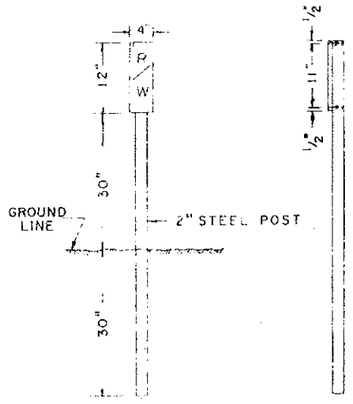
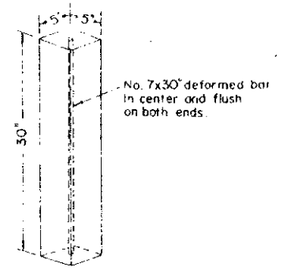
STANDARD RIGHT-OF-WAY MARKERS AND MONUMENTS



POST DETAIL



POST DETAIL



CONCRETE MONUMENT

NOTES

GENERAL:

CONTRACTOR SHALL USE CCC-C, POSTS UNLESS OTHERWISE SHOWN ON THE PLANS.

INSTALL POSTS 12" FROM MONUMENTS. IRON MONUMENTS AND POSTS SHALL BE INSTALLED ON RIGHT-OF-WAY LINE.

ALL POSTS SHALL BE INSTALLED WITH THE LETTER SIDE FACING THE PROJECT ROADWAY.

STANDARD R/W MARKERS SHALL BE PAID FOR AT THE CONTRACT UNIT PRICE PER EACH, COMPLETE IN PLACE, WHICH PRICE SHALL BE PAYMENT IN FULL FOR ALL EXCAVATION, BACK-FILLING, MATERIALS, LABOR, TOOLS, EQUIPMENT AND INCIDENTALS NECESSARY TO INSTALL THIS UNIT AS SHOWN ON THIS STANDARD DRAWING AT THE LOCATIONS DESIGNATED ON THE PLANS.

CONCRETE POSTS:

CONCRETE POST TO BE CLASS A CONCRETE.

STEEL POSTS:

THE RIGHT OF WAY MARKER SHALL HAVE AN ALUMINUM OR STEEL BACKING CONFORMING TO THE REQUIREMENTS OF SECTION 894-2 OF THE STANDARD SPECIFICATIONS. THE RIGHT OF WAY MARKER SHALL BE PAINTED OR HAVE REFLECTIVE SHEETING APPLIED. THE BACKING SHALL BE CUT TO SHAPE AND SHALL BE DEGREASED, ETCHED AND COATED AS SPECIFIED IN SECTION 754 OF THE STANDARD SPECIFICATIONS. THE PAINT SHALL CONFORM TO THE REQUIREMENTS OF SECTION 870 OF THE STANDARD SPECIFICATIONS AND SHALL BE WHITE AND BLACK ENAMEL. THE REFLECTIVE SHEETING SHALL MEET THE REQUIREMENTS OF SECTION 884 OF THE STANDARD SPECIFICATIONS, Type II. THE LEGEND SHALL BE PAINTED ON PAINTED BACKGROUND OR SCREENED OR DIRECT APPLIED ON REFLECTIVE SHEETING IN ACCORDANCE WITH SECTION 894 OF THE STANDARD SPECIFICATIONS.

THE POST, ANCHOR AND REINFORCING SLEEVE SHALL CONFORM TO THE REQUIREMENTS OF SECTION 894-7.6 OF THE STANDARD SPECIFICATIONS.

IRON MONUMENTS:

IRON MONUMENTS (1"X24") TO BE FURNISHED AND PLACED BY STATE HIGHWAY DEPARTMENT OR COUNTY HIGHWAY DEPARTMENT PERSONNEL AT SECTION LINES, RIGHT OF WAY BREAKS, CURVE POINTS, AND NEAR THE MID POINT OF EACH MILE. THE MONUMENTS AT THE MID POINT CAN BE ELIMINATED IF CURVE POINTS OR R/W BREAKS ARE IN THE IMMEDIATE VICINITY.

NOTE: POST AND BLOCKOUTS

THE POST AND BLOCKOUTS SHALL CONFORM TO THE REQUIREMENTS SECTION 850 OF THE STANDARD SPECIFICATION.

BOX BEAM GUARDRAIL.

BOX BEAM SHALL CONFORM TO THE REQUIREMENT OF SECTION 722 OF THE STANDARD SPECIFICATION.

(1) THE 18' SECTION SHALL BE REPLACED WITH A 15'-3" SECTION WITH THE LAST 3' SPACE REDUCED TO 3" AND HAVE THE TERMINAL CONNECTOR ATTACHED AND 12'-6" W BEAM SECTION AS SHOWN ON STD. D-722-2 THE FLARED END TREATMENT. INSTALLED ACCORDINGLY.

(2) THE 18' SECTION SHALL BE REPLACED WITH 15'-3" SECTION AND POST SPACING AS SHOWN FOR THE 15'-3" SECTION AND HAVE THE TERMINAL CONNECTOR ATTACHED AND 12'-6" W BEAM GUARDRAIL SECTION ON STD. D-722-2 . THE FLARED END TREATMENT INSTALLED ACCORDINGLY.

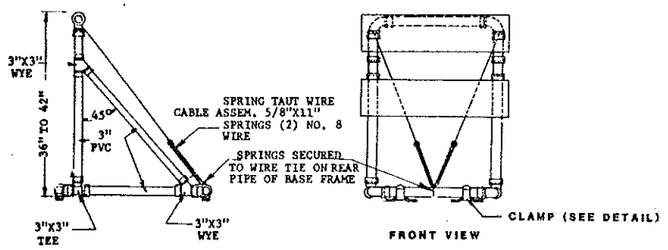
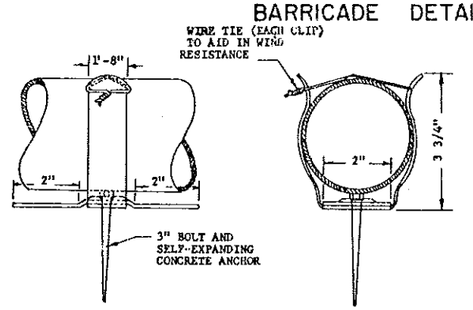
D 754-5



SIDE VIEW FRONT VIEW

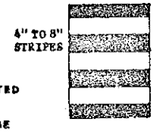


TYPICAL CLAMP DETAIL

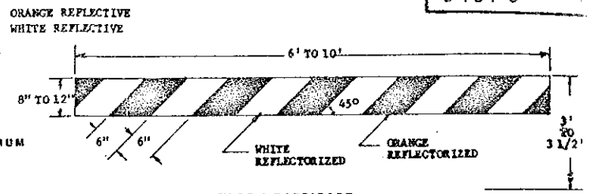
(SINGLE FIRE EXTINGUISHER CLIPS, 3 1/2" DIA.)

DELINEATOR DRUMS

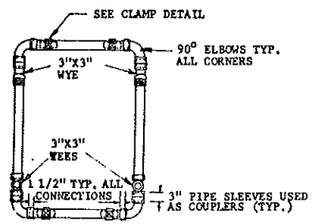
THE MARKINGS ON DRUMS SHALL BE ORANGE AND WHITE STRIPES 4 TO 8 INCHES WIDE. THERE SHALL BE AT LEAST THREE ORANGE AND TWO WHITE STRIPES. WHERE DRUMS HAVE RIBS OR INDENTATION THERE SHALL BE NO REFLECTORIZED SHEETING IN THIS AREA. THIS SPACE SHALL BE PAINTED ORANGE AND SHALL BE NO MORE THAN 2 INCHES WIDE. THE STRIPE COLOR SHALL BE CHANGED AT THESE POINTS (ORANGE ABOVE WHITE BELOW OR WHITE ABOVE AND ORANGE BELOW). THE DRUM SURFACE SHALL BE PREPARED AS RECOMMENDED BY THE SHEETING MANUFACTURER BEFORE REFLECTIVE SHEETING IS APPLIED.



DELINEATOR DRUM



TYPE I BARRICADE



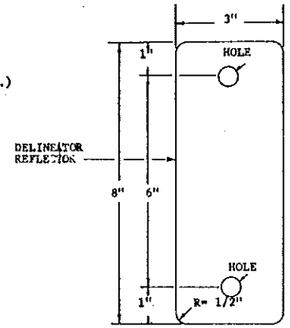
BASE

BREAKAWAY BARRICADE ASSEMBLY

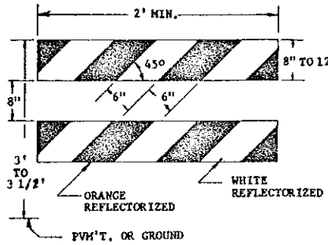
NOTE: THE PIPE, WYES, TEES ANDD ELBOWS USED TO CONSTRUCT TYPE II BARRICADES (SPECIAL) SHALL CONFORM TO THE REQUIREMENTS OF ASTM DESIGNATION: D2241 FOR PVC 1120 OR 1220, SDR 21, PRESSURE RATING 200 P.S.I. THE WYES, TEES, AND ELBOWS SHALL SHALL CONFORM TO THE REQUIREMENTS OF ASTM DESIGNATION : D-2466, TYPE II, GRADE 1. ALL JOINTS SHALL BE SLIP-FIT AND SHALL NOT BE THEADED OR CEMENTED.

3" PVC PIPE CONFORMING TO ASTM D2665-DWV OR ASTM D2729 MAY BE USED AS AN ALTERNATE TO ASTM D2241-SDR 21.

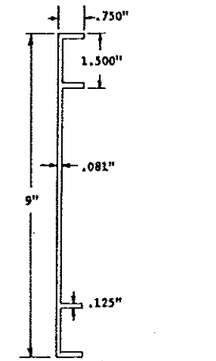
THE 9" X 48" BARRICADE RAIL SHALL BE FABRICATED FROM 0.025" ANODIZED ALUMINUM AND SHALL BE ATTACHED WITH 1 INCH NO. 14 PAN BEAD METAL SCREWS. COLORS: REFLECTIVE ORANGE AND REFLECTIVE WHITE.



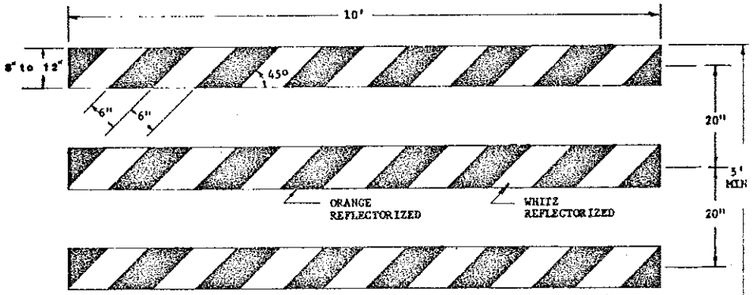
3" x 8" - 18 GUAGE GALVANIZED STEEL SHEETS, OR OR .080" ALUMINUM PLATE WITH WHITE REFLECTIVE SHEETING (TYPE III OR IV) AS SPECIFIED IN SECTION 894 OF THE STANDARD SPECIFICATIONS.



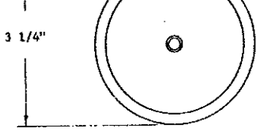
TYPE II BARRICADE



EXTRUDED ALUMINUM BARRICADE BAR DETAIL.

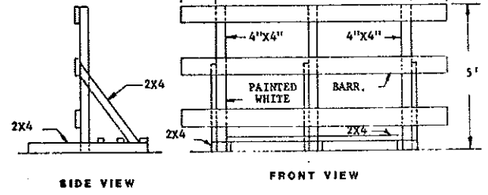


TYPE III BARRICADE



ACRYLIC PLASTIC REFLECTOR

DELINEATOR REFLECTOR SHALL MEET THE REQUIREMENTS OF SECTION 894.



SIDE VIEW FRONT VIEW

MOVABLE BARRICADE ASSEMBLY

NOTE: EACH MOVABLE BARRICCADE SHALL BE WEIGHTED DOWN BY A SUFFICIENT NUMBER OF SAND BAGS OR OTHER SUITABLE WEIGHT SO THAT IT WILL NOT BE BLOWN OVER BY THE WIND UNLESS THE MOVABLE SUPPORTING STRUCTURE IS CONSTRUCTED IN SUCH A MANNER THAT THE WIND CANNOT BLOW IT OVER. WEIGHT USED SHALL BE APPROVED BY THE ENGINEER IN THE FIELD. THE STRIPES SHALL SLANT DOWNWARD TOWARD THE SIDE WHICH TRAFFIC IS TO PASS. BARRICADES USED AT THE BEGINNING OF A PROJECT SHALL FACE TRAFFIC ENTERING THAT PROJECT.

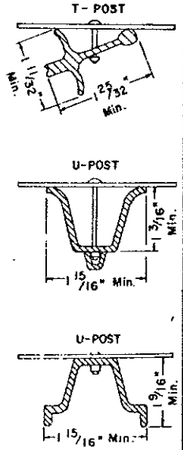
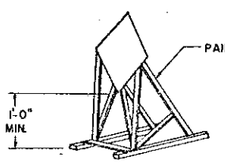
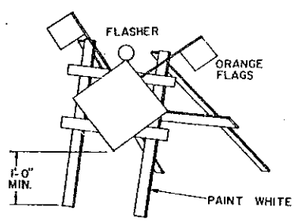
DELINEATOR ATTACHMENT AND POST MOUNTING DETAILS





PORTABLE SIGN MOUNTING



PORTABLE SIGN MOUNTING

NOTES:
Barricade and Sign Supports: Wooden supports shall be painted white. Steel supports shall be galvanized or painted.

NOTES:

DELINEATOR POSTS: Typical fence post sections are shown in Attachment Details. Other types of metal fence posts may be substituted upon approval of the engineer. These substituted posts shall have reflectors attached similar to the ones shown.

BARRICADE MOUNTING SIGNS: The bottom of the sign shall be flush with the top of the top rail. Wood sign posts shall be 4x4 min. SFS or equivalent steel posts. See Stds. D-754-5 thru D-754-9 for construction sign and barricade location details. All barricades and barricade mounted signs shall be assembled with 3/8" bolts.

SIGN SUPPORTS: The sign supports shall be imbeded to a sufficient depth so that the signs will remain plumb throughout duration of the project. It is suggested that the min. depth of imbedment be 5'-0".

MATERIAL: All signs shall be .100" aluminum, 12 gage galv. steel, 1/2" plywood or other approved mat'l.

HOLES: All holes to be punched round for 3/8" bolts.

ALTERNATE MESSAGES: The signs that have alternate messages may have these alternate messages placed on a reflectorized plate without a border and this plate installed and removed as required.

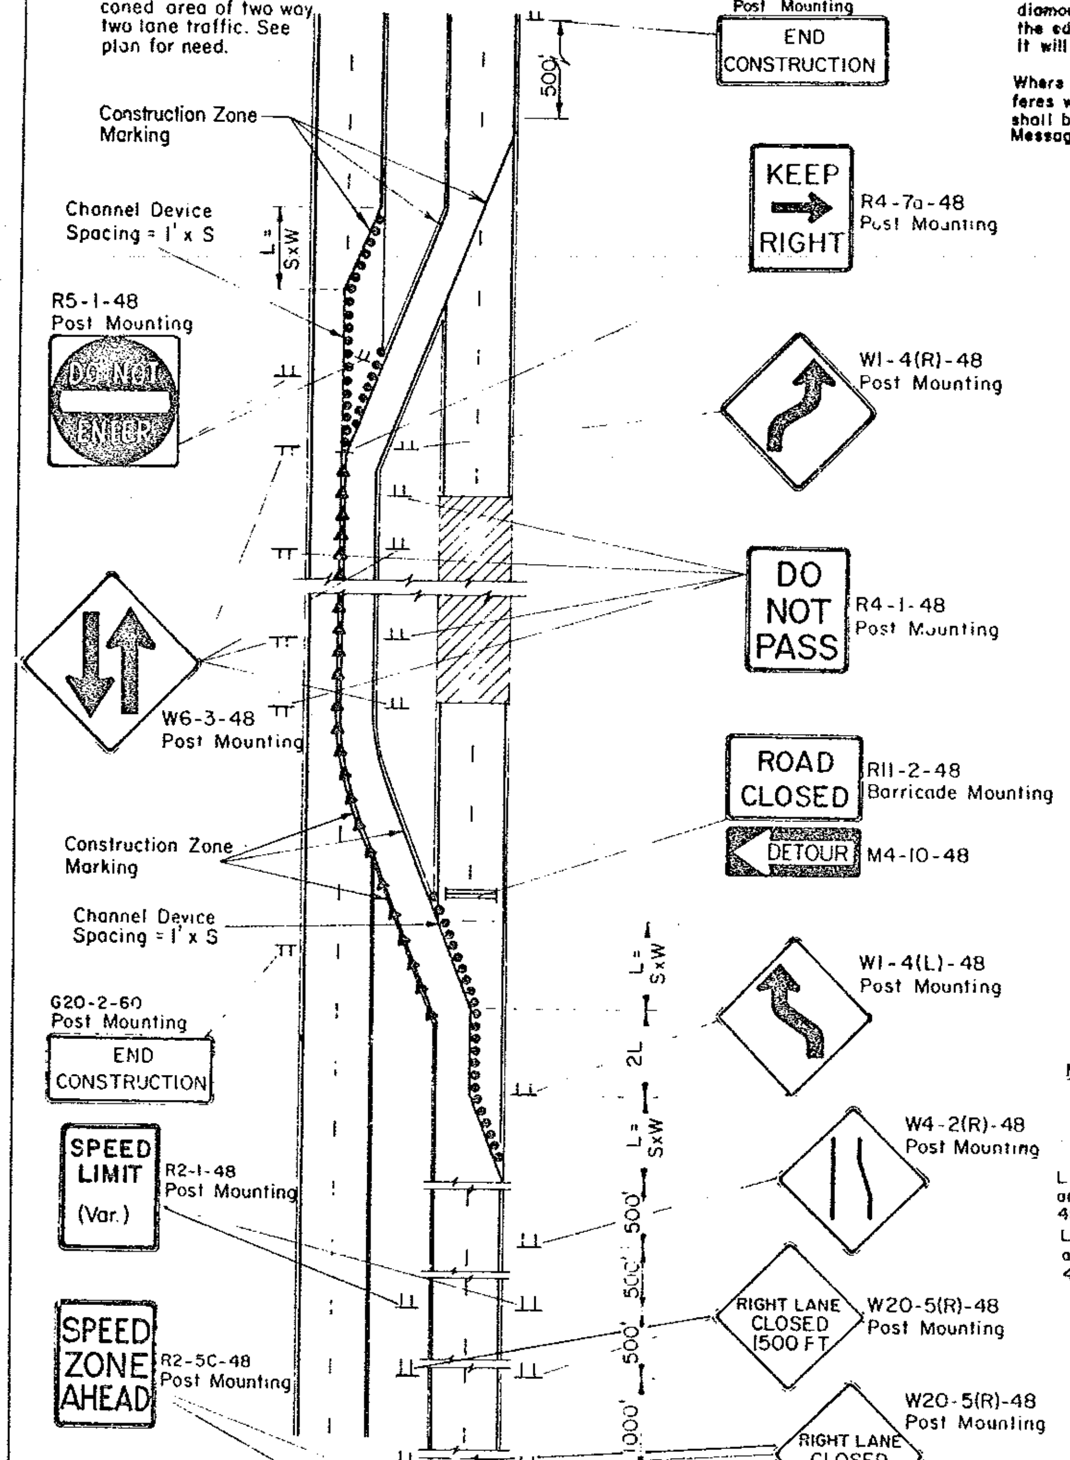
CONSTRUCTION SIGN AND BARRICADE LOCATION DETAILS

Note: Positive Barriers may be needed in the coned area of two way two lane traffic. See plan for need.



TYPE D
CONSTRUCTION SIGN LAYOUT

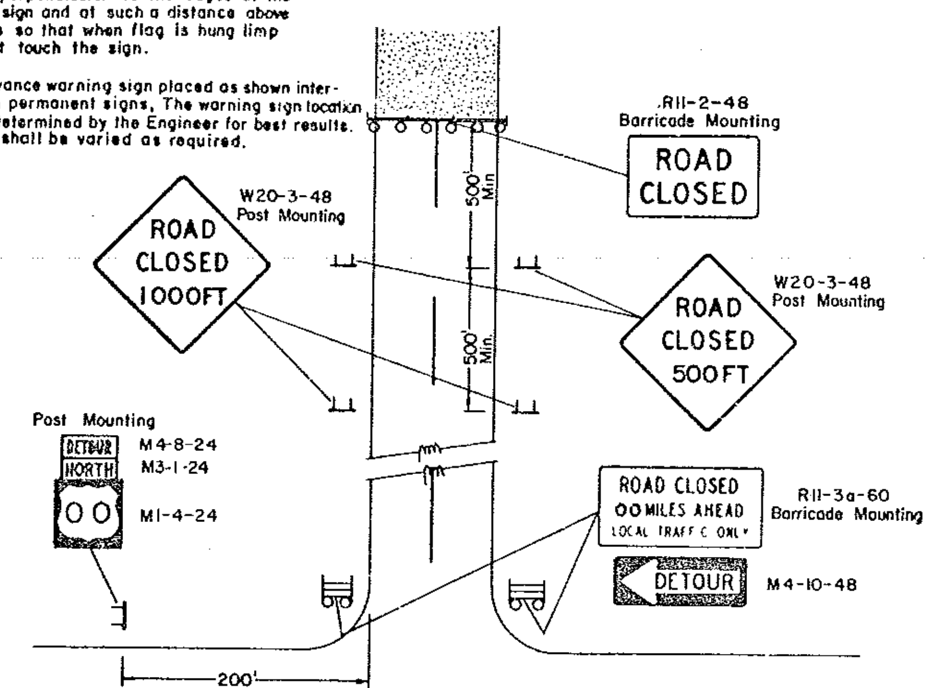
4 Lane Divided Highway With one roadway closed.

(Sign shown for one direction of travel only).

Longer than one day or outside of major work area

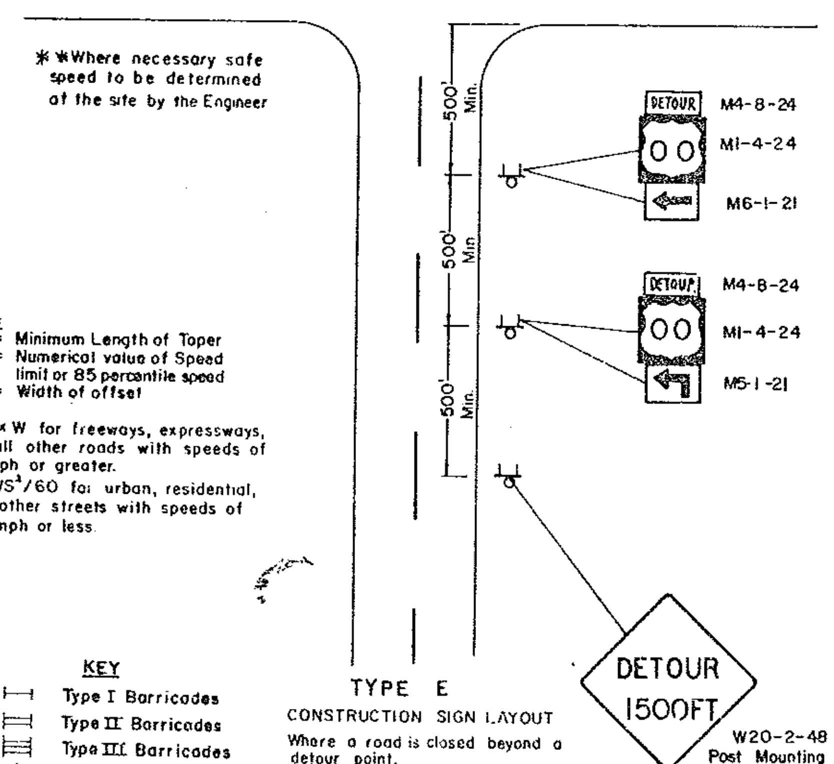
NOTE:
FLAGS: All warning signs shall have two orange warning flags 24" square mounted perpendicular to the edges of the diamond sign and at such a distance above the edges so that when flag is hung limp it will not touch the sign.

Where advance warning sign placed as shown interferes with permanent signs, The warning sign location shall be determined by the Engineer for best results. Messages shall be varied as required.



Note: Regulating traffic control devices to be modified as needed for the duration of the detour.

** Where necessary safe speed to be determined at the site by the Engineer



Note:
L = Minimum Length of Taper
S = Numerical value of Speed limit or 85 percentile speed
W = Width of offset

L = S×W for freeways, expressways, and all other roads with speeds of 45 mph or greater.
L = $WS^2/60$ for urban, residential, and other streets with speeds of 40 mph or less.

KEY

- Type I Barricades
- Type II Barricades
- Type III Barricades
- Cones
- Lighting Device
- Flagman
- Delineator Drums
- Signs
- Type A Delineator

TYPE E
CONSTRUCTION SIGN LAYOUT

Where a road is closed beyond a detour point.

(Sign shown for one direction of travel only)

Sign not shown on detour shall be shown in plans and installed and maintained by the contractor.

Longer than one day or outside of major work area

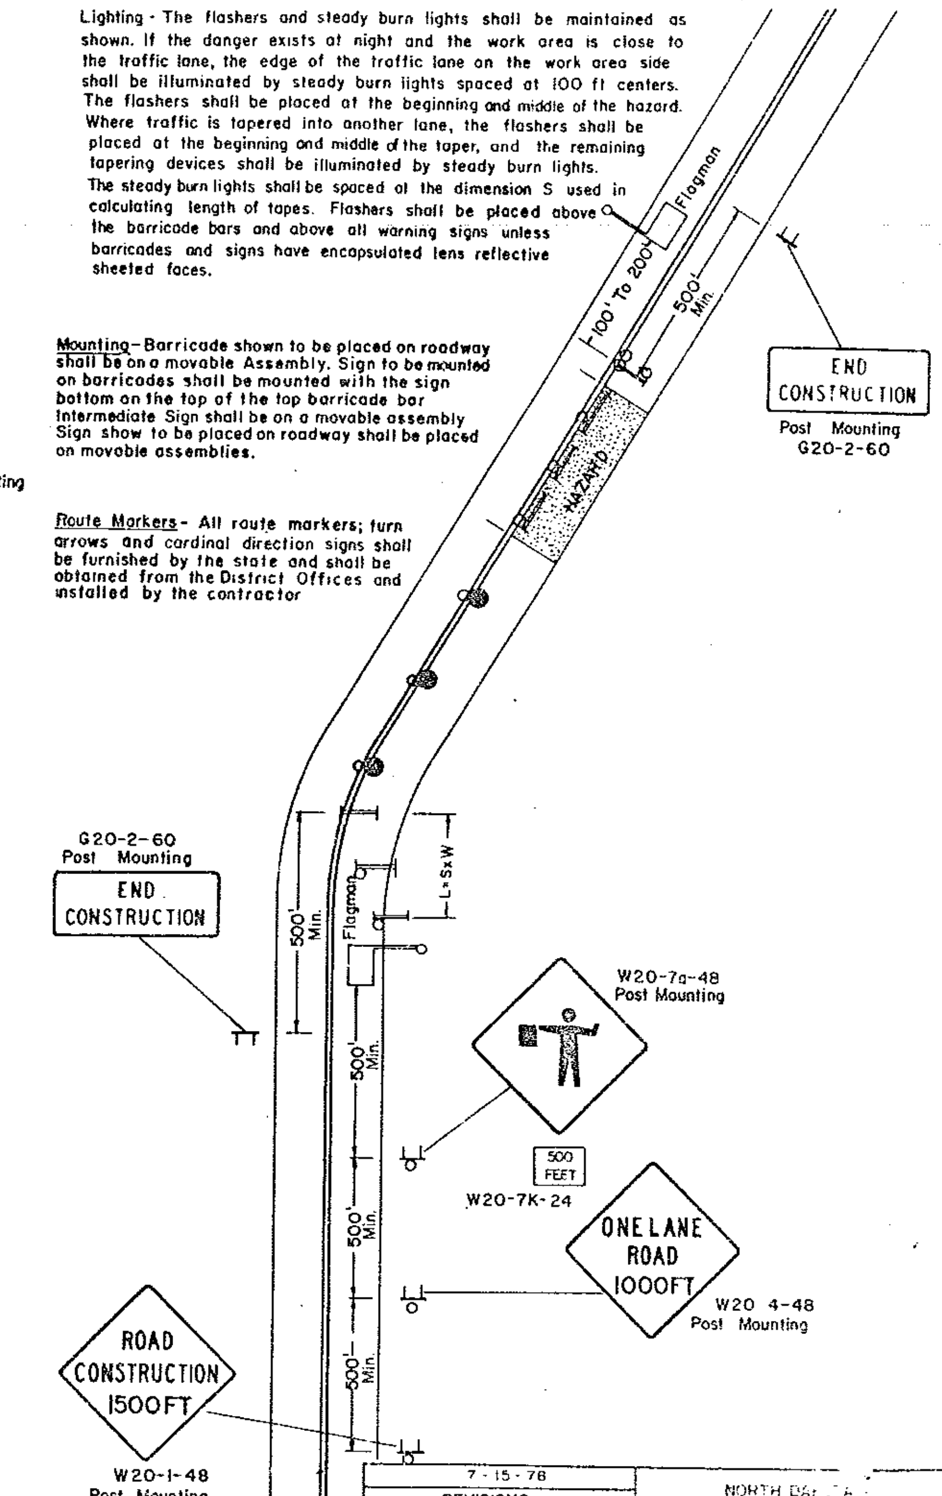
Delineator drums, Barricades or Cones used for tapering traffic shall be spaced at the demention "S".

"S" = Numerical value of speed limit or 85 percentile speed

Lighting - The flashers and steady burn lights shall be maintained as shown. If the danger exists at night and the work area is close to the traffic lane, the edge of the traffic lane on the work area side shall be illuminated by steady burn lights spaced at 100 ft centers. The flashers shall be placed at the beginning and middle of the hazard. Where traffic is tapered into another lane, the flashers shall be placed at the beginning and middle of the taper, and the remaining tapering devices shall be illuminated by steady burn lights. The steady burn lights shall be spaced at the dimension S used in calculating length of tapes. Flashers shall be placed above the barricade bars and above all warning signs unless barricades and signs have encapsulated lens reflective sheeted faces.

Mounting - Barricade shown to be placed on roadway shall be on a movable Assembly. Sign to be mounted on barricades shall be mounted with the sign bottom on the top of the top barricade bar. Intermediate Sign shall be on a movable assembly. Sign show to be placed on roadway shall be placed on movable assemblies.

Route Markers - All route markers; turn arrows and cardinal direction signs shall be furnished by the state and shall be obtained from the District Offices and installed by the contractor.



TYPE F
CONSTRUCTION SIGN LAYOUT

2 Lane Highway with one lane closed. Barricading is at a point where it is visible to approaching traffic

Warning sign sequence in opposite direction — same as one shown.

BASIS OF ESTIMATE
Sign Support Lengths

The sign support lengths have been calculated using the following information:

Ultimate Pavement Depth . 12"

Inslopes
- Lt. 3:1
- Rt. 3:1

Vertical Clearance

- Signs viewed from mainline . 60"
- Signs viewed from crossings . 60"

Graded Roadway Widths

- Mainline 50'
- Crossing roadways 50'

ASSEMBLY DETAILS

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	BRF-1-006(02)066	

D 754-23

MINIMUM HORIZONTAL CLEARANCE

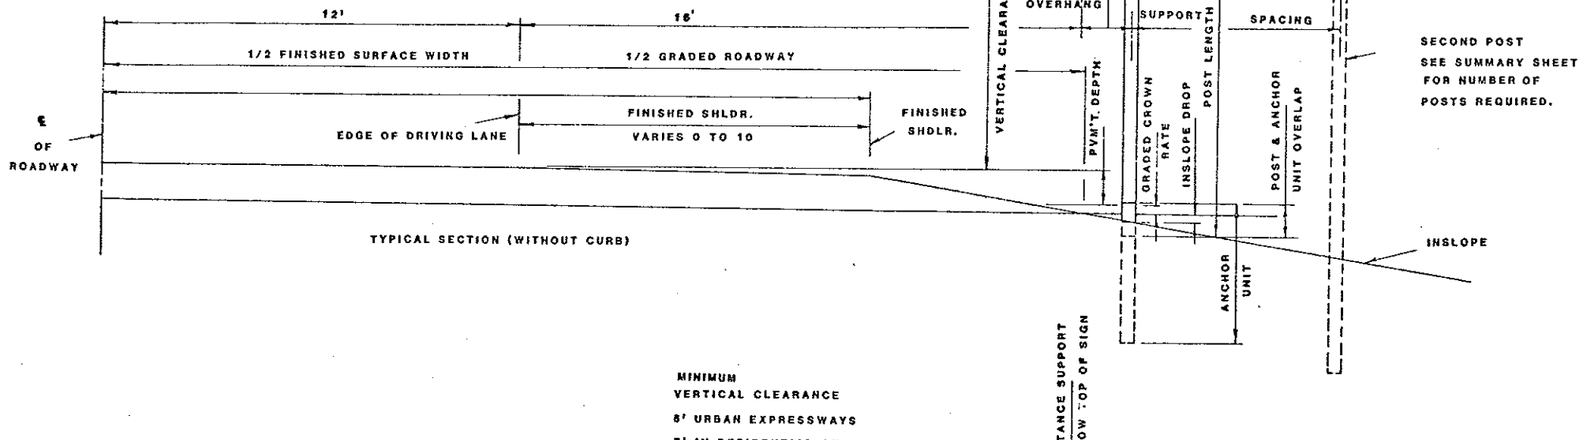
THE 16' CLEARANCE FROM THE EDGE OF THE DRIVING LANE TO THE EDGE OF THE SIGN SHALL BE FOR ALL ROADWAYS WITHOUT CURBS. ALL CURBED ROADWAYS SHALL HAVE 3' HORIZONTAL CLEARANCE FROM THE FACE OF THE CURB TO THE EDGE OF THE SIGN UNLESS NOTED OTHERWISE ON THE PLANS.

ALL BIKE ROUTE SHALL HAVE A 3' MINIMUM HORIZONTAL CLEARANCE FROM THE EDGE OF THE BIKE ROUTE TO THE EDGE OF THE SIGN.

MINIMUM VERTICAL CLEARANCE

5' RURAL ROADWAYS

6' ON RURAL OR URBAN EXPRESSWAYS

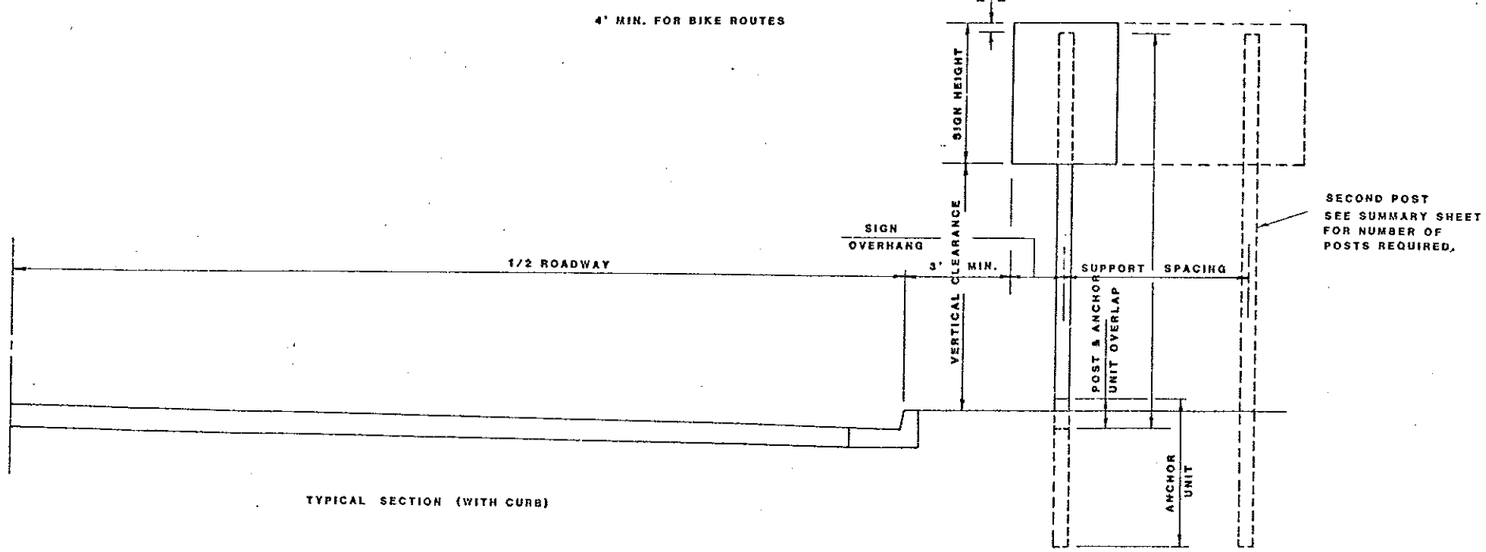


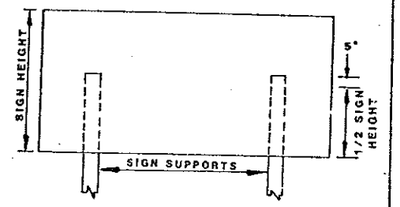
MINIMUM VERTICAL CLEARANCE

8' URBAN EXPRESSWAYS

7' IN RESIDENTIAL AND BUSINESS DISTRICTS WHERE PARKING WILL OCCUR

4' MIN. FOR BIKE ROUTES





HINGE LOCATION DETAIL

FOR 2 OR MORE POSTS ASSEMBLIES - WITH SLIP BASES.

NOTE

PAVEMENT DEPTH-THE PAVEMENT DEPTH USED TO DEVELOP SUMMARY SHEETS SHOULD BE THE ULTIMATE PAVEMENT DEPTH.

SEE PLANS FOR SIGN NUMBERS AND ASSEMBLY NUMBERS.

SIGN PUNCHING AND STRINGERS SHALL BE AS SHOWN ON STANDARDS.

HORIZONTAL CLEARANCE:

THE POST LENGTHS HAVE BEEN COMPUTED USING A HORIZONTAL CLEARANCE OF 16 FEET BETWEEN THE EDGE OF THE DRIVING LANE AND THE EDGE OF THE SIGN.

FOR AN ULTIMATE SHOULDER WIDTH OF 10 FEET, THE DISTRICTS HAVE THE OPTION OF SETTING THE SIGNS OUT TO 18 FEET CLEARANCE. IF THE CLEARANCE IS TO BE INCREASED TO 18 FEET, THE NECESSARY ADJUSTMENT IN SUPPORT LENGTH SHALL BE MADE IN THE FIELD.

(1) NOT REQUIRED ON ONE POST ASSEMBLIES AND TWO POST ASSEMBLIES WITH 2-1/4" OR 2" POSTS.

THE HINGE WILL NOT BE MEASURED AND THE COST OF THE HINGES SHALL BE INCLUDED IN THE PRICE BID FOR POSTS.

NOTE: METAL WASHER AND NYLON WASHERS USED ON SIGN FACE SHALL HAVE A MINIMUM OUTSIDE DIAMETER OF 15/16 INCH ±1/16 INCH AND 10 GAUGE THICKNESS.

NO PARKING SIGNS: ALL NO PARKING SIGNS THAT HAVE DIRECTIONAL ARROWS PLACED ON THEIR FACES SHALL BE PLACED AT 30 TO 45 DEGREE ANGLE WITH ONCOMING TRAFFIC. NO PARKING SIGNS PLACED AT THE ABOVE ANGLES MAY HAVE THE SUPPORT TURNED AT THE CORRECT ANGLE UNLESS THE NO PARKING SIGN IS PLACED WITH ANOTHER SIGN THAT HAS TO BE PLACED AT 90 DEGREE ANGLE WITH ONCOMING TRAFFIC. IN WHICH CASE THE DETAILED ANGLE STRAP SHOULD BE USED TO MOUNT THE NO PARKING SIGN. MATERIAL USED FOR THE ATTACHMENT STRAPS SHALL BE INCLUDED IN THE PRICE BID FOR FLAT SHEET SIGNS. FLAT WASHERS & LOCKWASHERS SHALL BE USED WITH ALL NYLON WASHERS

NOTE:

Material:

Signing Backing: The sign backing material thickness shall be as follows.
Steel: Signs having a width of less than 30" shall use 14 gauge material. Signs 30" or more shall use 12 gauge material.

Aluminum: Aluminum Alloy 6061-T6 and 5052 -H38 shall have the following minimum thickness: All signs shall be 0.100 inch.

Stringers:

Flange Channel : All stringers shall be flange channel 1.12# per foot and of the length shown.

Square Tube, Perforated: All stringers shall be square tube, perforated 1 1/2"X1 1/2" and of the length shown.

Holes:

Flange Channel: All holes shall be punched round for 3/8" diameter bolts.

Square Tube, Perforated: All holes shall be punched round for 3/8" diameter bolts.

General:

See plans for sign numbers to be used at each location.
See Std. D-754-24 square tube , perforated mounting details.
See Std. D-754-25 for flange channel mounting details.
