GENERAL NOTES

100 020 WORK SCHEDULE: In order to minimize interference with traffic operations, a detailed schedule shall be agreed to prior to beginning work, between the engineer, utility companies, and the contractor and subcontractors, if any.

100 022 GENERAL CONSTRUCTION REQUIREMENTS: It is the intent of the plans, the Standard Specifications of the North Dakota State Highway Department, and the Special Provisions to comply in every respect to the requirements set forth by the National Plumbing Code, the North Dakota State Health Department, and the ordinances established by the city of Mandan, North Dakota. It will be the responsibility of the contractor to insure that the above requirements are met in every respect.

100 030 UNDERGROUND UTILITIES: The contractor shall notify the local utility companies prior to the beginning of construction, so they may stake location and depth of all utilities in the project area. Subcutting or scarifying over utility lines may be eliminated if, in the opinion of the engineer, a hazardous situation exists. Separate plans, if any, showing relocation or adjustment work to be performed by utility companies to accommodate highway construction will be made available to the contractor, upon request to the engineer.

100 050 PROJECT ENGINEER RESPONSIBILITY:

(a) USC & G Bench Mark
As soon as it has been determined that a bench mark must be moved, consult your Construction Survey Manual (Sec. 150-4.9), for the proper steps needed to preserve the bench mark.

(b) All section corners must be monumented and a corner recordation form must be filed with the County Register of Deeds. See Appendix G of the Preliminary Survey Manual for instructions on how to fill out the form.

100 060 DETOURS: The contractor shall maintain the streets used as detours and repair areas damaged by the detoured traffic. Upon completion of the project, the contractor shall restore the streets to a condition at least equal to that which existed at the time traffic was routed over them. Work shall be as deemed necessary by the engineer. The repair and maintenance of the detours will be paid for in accordance with provisions for Haul Road Maintenance as set forth in this contract. Necessary route markers will be furnished by the State Highway Department and erected and maintained by the contractor as an incidental item.

(See note on traffic control sheet)

100 068 CONCRETE PROTECTION: Adjacent concrete shall be protected during the application of all bituminous and asphalt materials to prevent any discoloration of the concrete. Failure to comply will result in the contractor having to clean the concrete at his own expense.

100 130 TREES, SHRUBS, AND NATIVE GRASSES: The contractor shall exercise care in his construction operations to ensure that trees, shrubs, and native grasses within the right of way and outside the construction area are disturbed as little as possible.

100 133 The contractor will be required to conduct the construction activities in such a manner as to comply with the Air Pollution Control Regulations of the state of North Dakota. Water will be used to control dust on the construction site.

100 134 The contractor will be required to comply with the North Dakota State Highway Department's Standard Specifications and any Special Provisions that are considered necessary to control erosion.

100 140 HISTORICAL INFORMATION: If any scientific or historical information is encountered after construction is in progress, the Highway Department will immediately notify the Historical Society, and efforts will be made to protect the material until it has been examined by an archaeologist from the Historical Society. If future activities should result in the discovery of any cultural resources that are eligible for inclusion in the National Register of Historical Places, this will require compliance with Section 106 of the National Historic Preservation Act of 1966 and the Advisory Council on Historic Preservation "Procedures for the Protection of Historic and Cultural Properties" (36, CRF, Part 800).

100 150 SOILS SURVEY: The soil survey information has been carefully prepared and, while not guaranteed, is believed to be correct. The contractor is presumed to have verified the soil survey information before submitting a bid.

100 190 At the pre-job conference or prior to hauling over the project, the contractor and engineer shall agree on the designated haul roads so as to minimize hauling over the project.

GENERAL NOTES

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	M-1-806(12)071	4

200 010 SHRINKAGE: 20 percent additional volume in yardage computed by the end area method is allowed for shrinkage in earth embankment.

200 021 COMPACTION AND DENSITY CONTROL: Compaction and density controls shall be in accordance with Section 203-2.3.3 T-180 of the Standard Specifications, except that, if the subgrade is unstable (as evidenced by sponginess or rutting) when compacted to the required density, it will be necessary to dry the soils to obtain adequate stability. This may require drying below optimum moisture. The cost of such drying will be incidental to the price bid for "Common Excavation" (and/or "Borrow," if used).

200 030 SUBCUT, SCARIFY, AND RECOMPACT: Through all cut sections, the entire cut section to a point 1 foot behind the back of the new curb where possible, shall be scarified 1 foot below the proposed subgrade elevations. In sections where the subgrade to 1 foot behind back of new curb cannot be scarified due to footings or other reasons, the engineer shall determine the extent of subgrade to be scarified in the field. Any soft spots or areas containing an inferior quality of soil (as determined by the engineer) shall be subcut and replaced with acceptable backfill. The subcut and scarified areas shall be compacted as specified under compaction and density note. Subcutting will be measured and paid for as common excavation. Cost of scarifying and recompacting to be included in the price bid for "Common Excavation."

200 070 DISPOSAL OF UNSUITABLE MATERIAL: The contractor shall be responsible for the proper disposal of all removed concrete, pavements, foundations, and other unsuitable material. The disposal site shall not be a wetland and shall be a site approved by the engineer.

200 090 SCARIFYING AND RECOMPACTION OF EMBANKMENT AREAS: After removing topsoil, if any, from original ground under all roadway embankment areas, an additional one foot shall be scarified and recompacted. All scarifying and recompacting shall be included in price bid for "Common Excavation."

200 250 WASTE EXCAVATION DISPOSAL: Excavation to be wasted shall be salvaged and stockpiled on temporary construction easements as directed by the engineer.

200 301 WATER: The cost of applying water for compaction and for use as a dust palliative, as required, shall be included in the price bid for "Water." If city water is used, the contractor shall make arrangements with the city engineer.

200 450 BENCHING ON WIDENING SECTIONS: All inslopes, regardless of rate of slope, shall be benched unless otherwise directed by the engineer. Benches shall be deep enough to provide sufficient width to permit placing, spreading, and compacting equipment to operate and each bench shall be thoroughly compacted before additional embankment is placed. Cost of benching shall be included in the price bid for "Common Excavation, Type A."

300 010 AGGREGATE BASE COURSE, CLASS 5: 1600 tons of aggregate base course have been provided for maintaining traffic. It shall be used as directed by the engineer in the field.

400 010 PRIME, FOG, OR TACK COAT: When directed by the engineer, emulsified asphalt for prime, fog, or tack coat shall be diluted with water prior to application in a 50-50 ratio or other approved proportions. Cost of water shall be included in the price bid for "Emulsified Asphalt for Prime, Fog, or Tack Coat."

400 040 HOT BITUMINOUS PAVEMENT: The temperature of the mix at laydown shall not be less than 225°F, if the air temperature is above 60°F, and shall not be less than 240°F if the air temperature is below 60°F. The actual mixing temperature shall be adjusted as directed by the engineer within the allowable limitations to best suit construction conditions.

400 050 AUTOMATIC BATCHING EQUIPMENT: The automatic batching equipment as specified in Section 406-3.13.5 of the Standard Specifications will not be required on this project.

400 070 DIMENSIONS: Thicknesses shown on the typical sections for surfacing are approximate. It is intended that the plan tonnages provided for by the basis of estimate will be used uniformly throughout the project unless otherwise authorized by the engineer.

400 080 HOT BITUMINOUS PAVEMENT: The hot bituminous pavement shall be laid in two (2) lifts with the top lift having a depth of approximately 2 inches.

GENERAL NOTES

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	M-1-806(12)071	5

400 120 COMPACTION OF HOT BITUMINOUS PAVEMENT: The compaction equipment for mainline paving shall include not less than one approved steel roller or approved vibratory roller and one approved pneumatic tired roller. The initial compaction shall be completed before the mat drops below 170°F, and the specified density shall be obtained before the mat temperature drops below 140°F. The maximum speed of vibratory roller in the vibratory mode shall be 3 mph. The speed of nonvibratory rollers and vibratory rollers in the static mode shall not exceed 4 mph during initial and intermediate rolling prior to obtaining the required density.

400 145 When the contractor must encroach onto the driving lanes, flagpersons and flagperson signs must be provided by the contractor for directing the traffic through the construction area.

400 310 HOT BITUMINOUS PAVEMENT: Unless otherwise authorized by the engineer, placement of hot bituminous pavement (top lift only) for mainline surfacing will not be permitted when the temperature of the existing surface is below 40°F and air temperature is below 32°F.

406 010 HOT BITUMINOUS PAVEMENT: With the approval of the engineer, the class of hot bituminous pavement may be changed to allow the use of available hot bituminous.

550 010 PORTLAND CEMENT CONCRETE PAVEMENT, CLASS AE: Use 6.0 sacks of Portland Cement per cubic yard of concrete. Cost of cement, longitudinal joint sealer, and all steel used for tie bars shall be included in the unit price bid for "P.C.C. Pavement." The coarse aggregate for concrete may be Size No. 1 or Size No. 3. Size No. 3 will not have to be separated into two fractions. Whichever size is chosen, it must be used for the entire project unless othrwise approved by the engineer.

550 020 CURING: Curing materials shall meet the requirements of subsection 880-1 of the Standard Specifications.

550 030 DOWELLED JOINTS: The pay length of a dowelled expansion or contraction joint assembly shall be equal to the width of pavement in which the assembly is installed. Location of the dowelled expansion and contraction joints are shown on the plans.

550 040 TRANSVERSE JOINT SPACING (P.C.C. PAVEMENT): Mainline - 14'. See Joint Detail Sheet.

550 060 PAVEMENT REINFORCING OVER PIPE CROSSING: The P.C.C. Pavement over center line pipe crossings shall be reinforced with No. 4 reinforcing bar as shown on the detail sheet. The cost of the reinforcing steel shall be included in the price bid for "8-inch Nonreinforced Concrete Pavement.

550 090 PORTLAND CEMENT CONCRETE PAVEMENT: Section 550.3.1 of the Standard Specifications is modified as follows: The batching and weighing equipment shall conform to the general requirements of subsection 610.3.1.1. Automatic batching equipment as specified in 610.3.1.3 will not be required.

550 101 P.C.C. REINFORCEMENT: All reinforcement shall be positioned on approved supported in advance of concrete placement.

630 010 STORM SEWER: Where the new sewer is to be installed into an existing manhole or inlet barrel, the cost of cutting into the manholes or inlet barrels and grouting of sewer leads shall be included in the price bid for other items.

630 020 ADJUST WATER AND SEWER LINES: The exact depth of the existing water and sewer lines under the roadway is unknown. If it is determined in the field that adjustment or relocation of these lines is necessary to facilitate the installation of the new storm sewer, such work shall be done in accordance with Sec. 109-5 of the Standard Specifications, "Extra and Force Account Work."

630 031 JOINTS FOR SEWER PIPE: Joints shall be sealed with rubber gaskets or with a sealer approved by the engineer.

630 040 DRAINAGE: If the existing drainage facilities become inoperable before the new drainage system is functioning, the contractor shall provide sufficient temporary pumping and drainage facilities to keep the roadway drained to the satisfaction of the engineer. Not a pay item, cost to be incidental to the price bid for other items.

630 070 RELAYING PIPE: Only that pipe in good condition shall be relaid and determination of its fitness for relaying shall rest with the engineer.

630 182 CONCRETE PIPE TIES (TIE BOLTS): Unless otherwise shown on the plans, the flared end section and the end sections of pipe on all concrete pipe installations, including concrete cattle pass, shall be tied as shown on Standard D-630-30. On culverts without flared end sections, the end three sections shall be tied together.

706 010 UNDERDRAINS: All materials, (perforated and nonperforated P.V.C. pipe, bends, underdrain granular fill, filter fabric, frames, and lids, etc.) labor, and equipment necessary for construction of cleanouts shall be considered incidental to the price bid for "6-inch Perforated P.V.C. Pipe for Underdrains."

GENERAL NOTES

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	M-1-806(12)071	6

708 010 CURB AND GUTTER: The curb and gutter shall be curb and gutter Type I (Section A) in the areas where the water drains toward and along the gutter as detailed on the Standard Drawing D-708-1. All curb and gutter shall be paid for under "Curb and Gutter, Type I."

708 020 CURB ENDS: On street returns and other locations where the new curb and gutter ends and does not abut existing curb and gutter, the end two (2) feet of the curb shall be tapered from 6" in height to 0". A 1/2" premolded expansion joint which is full depth and the same shape as the curb and gutter shall be installed just ahead of the taper. An 18" tie bar shall be installed across the joint.

708 030 CLASS OF CONCRETE: The class of concrete used in the curb and gutter, sidewalks, and driveways shall be Class AE. The contractor shall have the option of using aggregate, Size No. 1, 3, 4, or 5 as defined in Section 806-2 of the Standard Specifications.

708 040 Dowel bars installed at expansion joints in the curb and gutter will not be paid for separately, but shall be included in the price bid for "Curb and Gutter - Type I."

714 010 ADJUST MANHOLES: The existing manhole castings that are required to be raised may be brought to their respective elevations by the use of adapter rings of a grade and type approved by the engineer. Cost of all materials and labor required to perform the work as noted above, shall be incidental to the price bid for "Adjust Manholes."

762 010 MAINTAINING ACCESS: The contractor will be responsible for providing access to all residential dwelling and business establishments adjacent to this project. Final details on location of access points and construction procedures shall be worked out with the engineer in the field prior to start of the project.

762 030 MAINTAIN TRAFFIC: The Contractor shall maintain local traffic through all construction areas. He shall arrange his work so that there will be the least amount of hindrance to traffic.

UNDERDRAINS: All perforated PVC pipe used for underdrains shall be encased in Coarse Aggregate which is wrapped with filter fabric. The Coarse Aggregate shall meet the Screen Analysis of Size 1, 2, 3, or 4 Aggregate in Section 806-2 of the Standard Specifications. The Filter Fabric shall be one of the following:

Dupont Typar Style	3401
Mirafi	1405
Stabilanka	T-80

or an equivalent material approved by the Engineer. The cost of Coarse Aggregate Filter Material and Filter Fabric shall be incidental to the price bid for 6" Perforated PVC Underdrain Pipe.

The price bid for the installation of PVC Underdrain Pipe shall include the cost of trenching, pumping the ground water encountered in the trenches and shoring, if any, required to maintain roadway stability. The Contractor shall dispose of the excess excavation in a manner approved by the Engineer.

The cost of all fittings required for PVC Underdrain Pipe installation including fame and lids for clean-out tubes shall be included in the price bid for PVC Underdrains.

If necessary, the Engineer will adjust the Underdrain System to insure the capture of the ground water.

ABUTTING FRAME ENDS FOR TYPE 2 DOUBLE

NOTES:

The contractor may, if he so desires, construct the curb inlets lower than plan grade and bring the casting to grade using pre-cast adjusting rings or in a manner satisfactory to the engineer in the field.

The contractor may, if he so desires, construct inlet boxes of solid concrete block or brick. The materials used shall be approved by the engineer in writing. Construction of the boxes shall be in accordance with section 714-3 of the standard specifications.

The contractor shall have the option of using precast or poured in place boxes for inlets and precast or poured in place bases for inlets.

The class of concrete used in the poured inlets or bases shall be A.E. The aggregate size shall be approved by the engineer in the field.

Precast 30" barrels for inlets shall be constructed in accordance with ASTM 478.

Other castings, similar in dimenion and of equal or greater weight than that shown, may be used if accepted by the engineer in writing.

Metal used in the manufacture of castings shall conform to AASHTO M-105, Class 35B.

JOINT SEALER AT ALL CURB & GUTTER SECTIONS

NOTE:
Preformed inserts used to form grooves for transverse joints shall be of a type approved by the Engineer. The preformed insert shall have a maximum top width of ¼" and a minimum depth of 2". The preformed insert shall form a groove so shaped that the top edge of the installed sealer will be ⅛" to ¼" below the top edge of the P.C.C. Pvm't. Transverse Joint may be sawed to dimensions shown in lieu of forming.
Preformed compression joint seals of other shapes may be used. The shape and dimensions must be approved by the Engineer.

ANGULAR POSITION OF ROWS

PIPE SIZE	ROWS OF PERFORATIONS	NO. OF PERFORATIONS PER ROW*
6	4	48

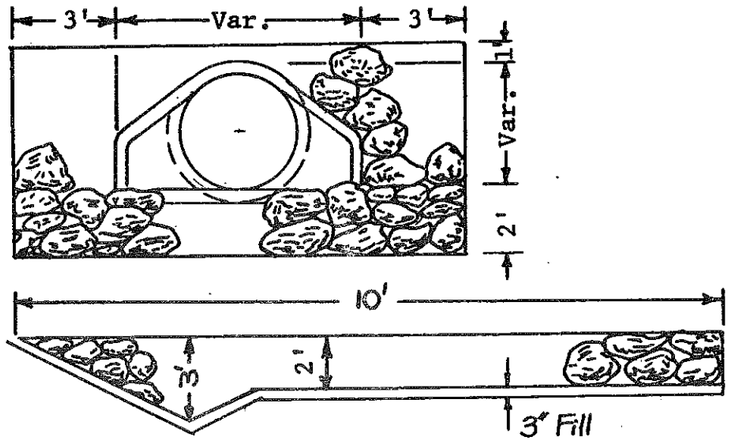
*For 12.5 Foot Pipe Laying Lengths

PERFORATED PVC SEWER PIPE

1. TYPE OF PIPE
   The pipe shall be Polyvinyl Chloride Sewer Pipe with Solvent Cemented Joints as specified in ASTM Spec. No. 3034.

2. Perforations shall be circular and ¼" + 1/16" in diameter. They should be arranged in ROWS parallel to the axis of the pipe and shall be spaced approximately 3" center to center along the ROWS. The spigot end of the pipe shall be unperforated for a length equal to the depth of the socket. The placement and total number of the ROWS shall be as shown below with an allowable tolerance of +10°. The spigot and bell end shall be unperforated for a length equal to the depth of the spigot.

3. The nominal laying length of the pipe shall be 12.5 Feet. Shorter or longer laying lengths shall be provided if required.



Filter Fabric

LOOSE ROCK RIPRAP

At Pipe Ends

NOTE: The Filter Fabric Material shall be Dupont Typar Style 3401, Mirafi 1405, Stabilanka T-80 or an equivalent material approved by the Engineer. A two foot overlap shall be used where required. Equipment shall not be allowed directly on the filter fabric. A minimum of 3" Excavation shall be placed over the Filter Fabric to protect the material during riprap installation. Riprap shall be installed according to Plan and Standard Specification 702. The Filter Fabric Material and Excavation costs shall be included in the price bid for "Loose Rock Riprap".

CORRUGATED STEEL PIPE CULVERTS AND END SECTIONS
(ROUND PIPE)

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	M-1-806	38

D-630-4

NOTES:

Pipe and Connecting Bands shall conform to applicable sections of N.D.S.H.D. Standard Specifications and to AASHO M-36.

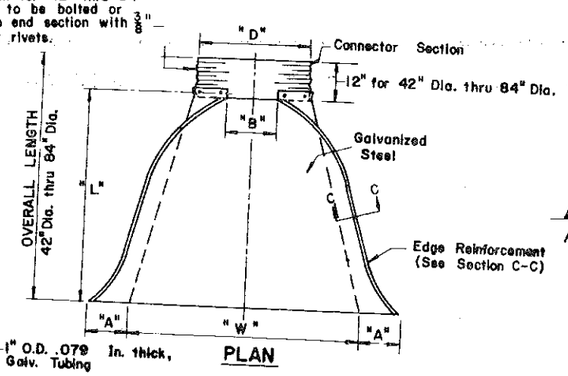
Top edge of all End Sections to have tubing reinforcement or rolled tubed reinforcement (See Section A-A). The tubing is to be supplemented with 2"x2"x ¼" Galv. Angle for 60" thru 72" Dia. and 2½"x2½"x¼" Galv. Angle for 78" and 84" Dia. Angles to be attached by Gal. ⅜ ø bolts and nuts. Angles are to extend from Pipe to the corner wing bend.

Elongated pipe shall be factory preformed so that the vertical diameter shall be 5% greater and the horizontal diameter 5% less than a circular pipe.

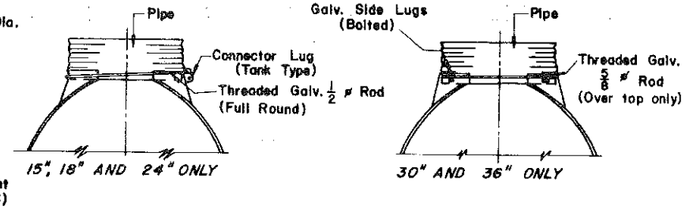
Fill Height Tables are based on the following criteria:

1. Embankment weight = 120 lb/ft³
2. Max. pipe deflection = 5%
3. Bedding - Class C
4. Compaction = 95% Proctor Density
5. Modulus of passive soil resistance (E') = 1400 psi
6. H-20 Live Load

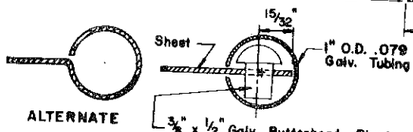
This connection for 42" thru 84" diameter pipe to be bolted or riveted to the end section with ⅜" Galv. bolts or rivets.



PLAN



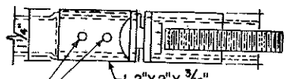
ROD CONNECTION DETAILS



ALTERNATE

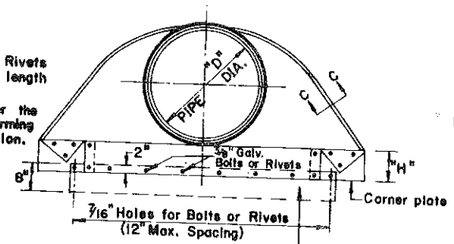
⅜" x ½" Galv. Buttonhead Rivets spaced 6" C. to C. Overall length of rivets = 0.78".

NOTE: Tubing is slipped over the sheet and rivets prior to forming operations of the End Section.



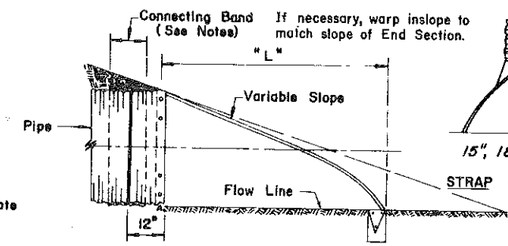
2 - SPOT-WELDS TO DEVELOP STRENGTH OF BOLT

SECTION C-C



ELEVATION

Galv. Toe Plate required on End Sections for pipe of 30" dia. or larger. Plate to be fastened to End Section in field. Thickness of Toe Plate to be same as End Section. Where Toe Plate is needed the Toe Plate, Bolts and Nuts are to be included in price bid for End Sections.



TYPICAL CROSS-SECTION
(Showing Connector Section)

* These sizes have 0.138 in. center panels.
** Pipe diameter is equal to dimension "D" of end section.
Manufacturers tolerances of above dimensions will be allowed.
Splices to be the lap riveted type.
Multiple panel bodies shall have lap seams which are to be tightly joined with ⅜" ø galv. bolts or rivets. Nuts to be torqued to 25 lbs. ±.

* These sizes shall have 0.135 In. thick center panels.

** Pipe diameter is equal to dimension "D" of End Section.

Manufactures tolerances of above dimensions will be allowed.

78" and 84" diameter Pipe shall be 5 % vertically elongated.

RIVETED OR HELICAL FABRICATION 2 2/3 x 1/2 INCH CORRUGATIONS

PIPE DIA. (IN.)	MIN. COVER (IN.)	MAX. FILL HEIGHT OVER TOP OF PIPE FOR METAL THICKNESS (IN.) .060	.075	.105	.135	.164

48	12			40	41	43
54	12			35	37	38
60	12				33	34
66	12				30	31
72	12					29
78	12					26
84	12					24

Fill Height Table is based on the following criteria:

1. Embankment weight = 120 lb/ft^3
2. Max. pipe deflection = 5 %
3. Bedding - Class C
4. Compaction = 95 % Proctor Density
5. Modulus of passive soil resistance (E') = 1400 psi
6. H-20 Live Load

NOTES:

1. End Sections shall be made from Aluminum Alloy 3004-0, clad 5% each side with Alloy 7072.
2. Corner Plate shall be the same material and thickness as End Section.
3. Rivets shall be Aluminum Alloy 6053-T4.
4. Threaded Rods shall be Aluminum Alloy 6061-T6.
5. Connector & Side Lugs, Bolts, and Nuts shall be Hot-Dipped Galvanized Steel.
6. Multiple panel bodies shall have 2" Lap Seams which are to be tightly joined with 3/8" diameter rivets spaced 6" C to C.
7. Top edge of all End Sections to have rolled edge reinforcement (See Section A-A). The rolled edge is to be supplemented with 2"X2"X1/4" Aluminum Alloy Angle for 60" thru 72" diameter and 2 1/2"X 2 1/2"X1/4" Angle for 78" and 84" diameter. Angles to be attached by 3/8" diameter bolts and nuts. Angles are to extend from pipe to the corner of the wing bend.
8. Aluminum Alloy Toe Plate required on End Sections for Pipe of 30" diameter or larger. Plate to be fastened to End Section in field. Thickness of Toe Plate to be same as End Section. Where Toe Plate is needed, the Toe Plate, Nuts, and Bolts are to be included in price bid for End Sections.
9. Connector Section, when specified, shall be Corrugated Aluminum Alloy Pipe Culvert.
10. Reinforcement for edge of End Section shall be Alloy 6063-F.
11. Pipe and Connecting Bands shall Conform to Applicable Sections of N.D.S.H.D. Standard Specifications and to A.A.S.H.O. M-196 and M-211.

NOTES: BOTTOMS OF MANHOLES SHALL BE CUT OR PRECAST SQUARE TO FIT THE BASE GROUT JOINT BETWEEN BASE AND WALL WITH CEMENT MORTAR. THE CONTRACTOR MAY, IF HE SO DESIRES, CONSTRUCT THE MANHOLES LOWER THAN PLAN GRADE AND BRING THE CASTING TO GRADE USING PRECAST ADJUSTING RINGS IN A MANNER SATISFACTORY TO THE ENGINEER IN THE FIELD.

THE CONTRACTOR SHALL HAVE THE OPTION OF USING PRE-CAST OR POURED IN PLACE BASES.

PRECAST BASES SHALL BE REINFORCED AS SHOWN IN LISTING FOR EACH SIZE BASE.

THE CLASS OF CONCRETE USED IN POURED BASES SHALL BE CLASS AE.

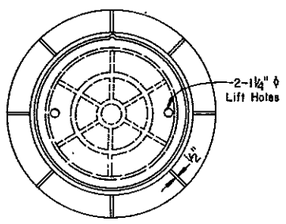
THE AGGREGATE SIZE SHALL BE APPROVED BY THE ENGINEER.

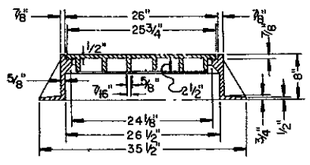
PRECAST BARRELS SHALL BE CONSTRUCTED IN ACCORDANCE WITH ASTM 478.

NOTE: METHOD OF MEASUREMENT FOR MANHOLES SHALL BE AS FOLLOWS: THE CONTRACT UNIT PRICE BID FOR MANHOLES SHALL INCLUDE THE FURNISHING AND INSTALLING THE FOLLOWING:

1. CAST IRON RING AND COVER OR BEEHIVE CASTING & COVER
2. PRECAST COVER
3. CONCRETE BASE
4. CONCRETE ADJUSTING RINGS

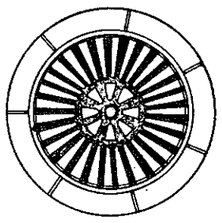
THE ITEM "MANHOLE RISER" SHALL INCLUDE THE FURNISHING & INSTALLING OF THE REQUIRED LENGTH OF RISER & CAST IRON STEPS.

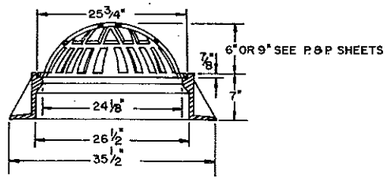




MANHOLE CAST IRON RING & COVER

Weight 460 Lbs.



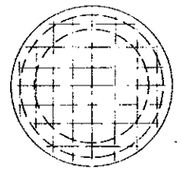


BEEHIVE CASTING & COVER

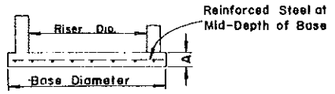
(To be used when noted on plans)

6" Beehive Weight 285 Lbs.

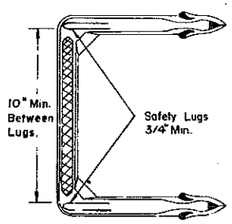
9" Beehive Weight 300 Lbs.



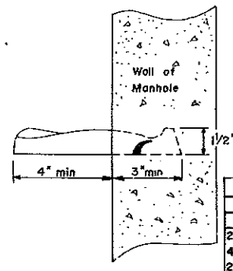
TOP VIEW



PRECAST MANHOLE BASE



STEP DETAIL



MANHOLE RISER SHALL BE PRODUCED IN ACCORDANCE WITH ASTM 478.

MANHOLE STEP SHALL BE CORROSION RESISTANT AND SHALL HAVE A MINIMUM VERTICAL LOAD RESISTANCE OF 400 POUNDS AND A PULL-OUT RESISTANCE OF UP TO 1000 POUNDS. CONFIGURATION OF THE STEPS SHALL BE APPROVED BY THE ENGINEER.

THE CONTRACTOR MAY, IF HE SO ELECTS, CONSTRUCT MANHOLES OF SOLID CONCRETE BLOCK OR BRICK. THE MATERIALS SHALL BE APPROVED BY THE ENGINEER IN WRITING. THE TYPE OF CONSTRUCTION SHALL BE AS SPECIFIED IN SECTION 714-3 OF THE STANDARD SPECIFICATIONS.

OTHER CASTINGS, SIMILAR IN DIMENSION AND OF EQUAL OR GREATER WEIGHT THAN THAT SHOWN MAY BE USED IF ACCEPTED BY THE ENGINEER IN WRITING.

METAL USED IN THE MANUFACTURE OF CASTINGS SHALL CONFORM TO AASHTO M-105, CLASS 35 B.

SPECIFICATIONS. THE PIGMENTED PLASTIC FILM SHALL BE INSTALLED IN ACCORDANCE WITH THE REFLECTIVE SHEETING MANUFACTURERS RECOMMENDATION.

THE BORDERS SHALL HAVE THE RADII AND WIDTH SHOWN ON THE PLANS. THE LETTERS SHALL BE FABRICATED IN ACCORDANCE WITH THE STANDARD LETTER GUIDE OF THE HEIGHT AND SERIES SHOWN ON THE PLANS. THE DETAILS OF THESE LETTERS MAY BE OBTAINED FROM THE STATE HIGHWAY DEPARTMENT OR THE SHEETING MANUFACTURER.

NOTE: ALL SIGNS SHALL HAVE REFLECTORIZED MESSAGE BORDER AND BACKGROUND, UNLESS SHOWN OTHERWISE ON THE PLANS. IN NO CASE IS THE COLOR BLACK REFLECTORIZED.

STANDARD SIGNS THAT ARE SHOWN IN THE CONSTRUCTION SIGN AND BARRICADE LOCATION DETAILS SHALL BE FABRICATED IN THE SHAPE, COLOR AND DIMENSIONS AS SHOWN IN THE STANDARD SIGNS LAYOUT BOOKLET.

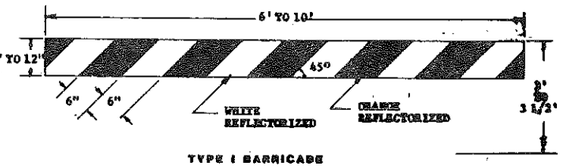
TYPICAL CLAMP DETAIL

(SINGLE FIRE EXTINGUISHER CLIPS, 3 1/2" DIA.)

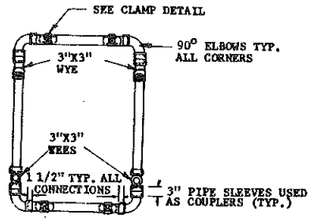
DELINEATOR DRUMS

THE MARKINGS ON DRUMS SHALL BE ORANGE AND WHITE STRIPES 4 TO 8 INCHES WIDE. THERE SHALL BE AT LEAST THREE ORANGE AND TWO WHITE STRIPES. WHERE DRUMS HAVE RIBS OR INDENTATION THERE SHALL BE NO REFLECTORIZED SHEETING IN THIS AREA. THIS SPACE SHALL BE PAINTED ORANGE AND SHALL BE NO MORE THAN 2 INCHES WIDE. THE STRIPE COLOR SHALL BE CHANGED AT THESE POINTS (ORANGE ABOVE WHITE BELOW OR WHITE ABOVE AND ORANGE BELOW). THE DRUM SURFACE SHALL BE PREPARED AS RECOMMENDED BY THE SHEETING MANUFACTURER BEFORE REFLECTIVE SHEETING IS APPLIED.

DELINEATOR DRUM



TYPE I BARRICADE



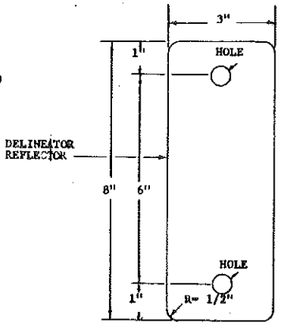
BASE

BREAKAWAY BARRICADE ASSEMBLY

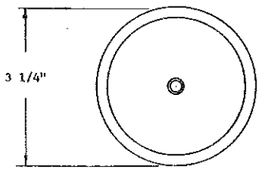
NOTE: THE PIPE, WYES, TEES ANDD ELBOWS USED TO CONSTRUCT TYPE II BARRICADES (SPECIAL) SHALL CONFORM TO THE REQUIREMENTS OF ASTM DESIGNATION: D2241 FOR PVC 1120 OR 1220, SDR 21, PRESSURE RATING 200 P.S.I. THE WYES, TEES, AND ELBOWS SHALL SHALL CONFORM TO THE REQUIREMENTS OF ASTM DESIGNATION : D-2466, TYPE II, GRADE 1. ALL JOINTS SHALL BE SLIP-FIT AND SHALL NOT BE THEADED OR CEMENTED.

3" PVC PIPE CONFORMING TO ASTM D2665-DWV OR ASTM D2729 MAY BE USED AS AN ALTERNATE TO ASTM D2241-SDR 21.

THE 9" X 48" BARRICADE RAIL SHALL BE FABRICATED FROM 0.025" ANODIZED ALUMINUM AND SHALL BE ATTACHED WITH 1 INCH NO. 14 PAN BEAD METAL SCREWS. COLORS: REFLECTIVE ORANGE AND REFLECTIVE WHITE.



3" x 8" - 18 GUAGE GALVANIZED STEEL SHEETS, OR OR .080" ALUMINUM PLATE WITH WHITE REFLECTIVE SHEETING (TYPE III OR IV) AS SPECIFIED IN SECTION 894 OF THE STANDARD SPECIFICATIONS.



ACRYLIC PLASTIC REFLECTOR

DELINEATOR REFLECTOR SHALL MEET THE REQUIREMENTS OF SECTION 894.

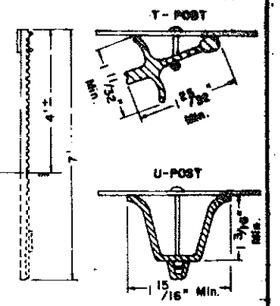
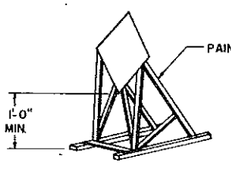
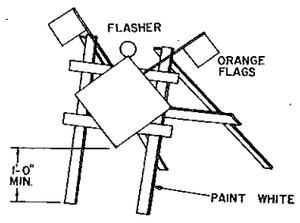
DELINEATOR ATTACHMENT AND POST MOUNTING DETAILS





PORTABLE SIGN MOUNTING



PORTABLE SIGN MOUNTING

NOTES:

Barricade and Sign Supports: Wooden supports shall be painted white. Steel supports shall be galvanized or painted.

ADVANCE WARNING FLASHING OR SEQUENCING ARROW PANELS: The minimum mounting height shall be 7 feet above the roadway to the bottom of the panel, except on vehicle mounted panels which shall be as high as practicable.

NOTES:

DELINEATOR POSTS: Typical fence post sections are shown in Attachment Details. Other types of metal fence posts may be substituted upon approval of the engineer. These substituted posts shall have reflectors attached similar to the ones shown.

BARRICADE MOUNTING SIGNS: The bottom of the sign shall be flush with the top of the top rail. Wood sign posts shall be 4x4 min. SFS or equivalent steel posts. See Stds. D-754-5 thru D-754-9 for construction sign and barricade location details. All barricades and barricade mounted signs shall be assembled with 3/8" bolts.

SIGN SUPPORTS: The sign supports shall be imbedded to a sufficient depth so that the signs will remain plumb throughout duration of the project. It is suggested that the min. depth of imbedment be 5'-0".

MATERIAL: All signs shall be .100" aluminum, 12 gage galv. steel, 1/2" plywood or other approved mat'l.

HOLES: All holes to be punched round for 3/8" bolts.

ALTERNATE MESSAGES: The signs that have alternate messages may have these alternate messages placed on a reflectorized plate without a border and this plate installed and removed as required.

CONSTRUCTION SIGN AND BARRICADE LOCATION DETAILS

Lighting- The flashers and steady burn lights shall be maintained as shown. If the danger exists at night and the work area is close to the traffic lane, the edge of the traffic lane on the work area side shall be illuminated by steady burn lights spaced at 100 ft. centers. The flashers shall be placed at the beginning and middle of the hazard. Where traffic is tapered into another lane, the flashers shall be placed at the beginning and middle of the of the taper and the remaining tapering devices shall be illuminated by steady burn lights. The steady burn light shall be spaced at the dimension. S used in calculating length of tapes. Flashers shall be placed above the barricade bars and all warning signs unless barricades and signs have encapsulated lens reflective sheeted face.

FLAGS: All advance warning signs shall have two orange warning flags 24" square mounted perpendicular to the edges of the diamond sign and at such a distance above the edges so that when flag is hung limp it will not touch the sign.

Delineator Drums, Barricades or cones used for tapering traffic shall be spaced at the demention "S".

"S" = Numerical value of speed limit or 85 percentile speed

Where advance warning sign placed as shown interferes with permanent signs, The warning sign location shall be determined by the Engineer for best results. Messages shall be varied as required.

Mounting- Barricade shown to be placed on roadway shall be on a movable Assembly. Sign to be mounted on barricades shall be mounted with the sign bottom on the top of the top barricade bar Intermediate Sign shall be on a movable assembly Sign show to be placed on roadway shall be placed on movable assemblies.

* * * Use Flagman when traffic must use one lane or when the motorist needs to be advised as to his safety while traveling through work area.

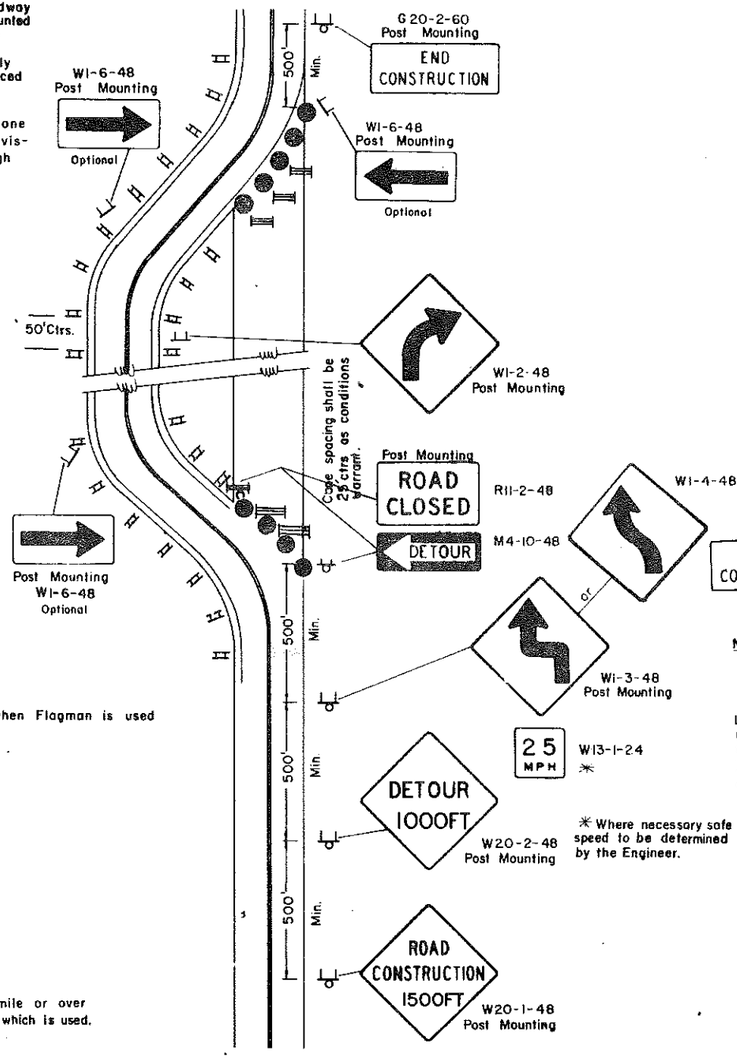
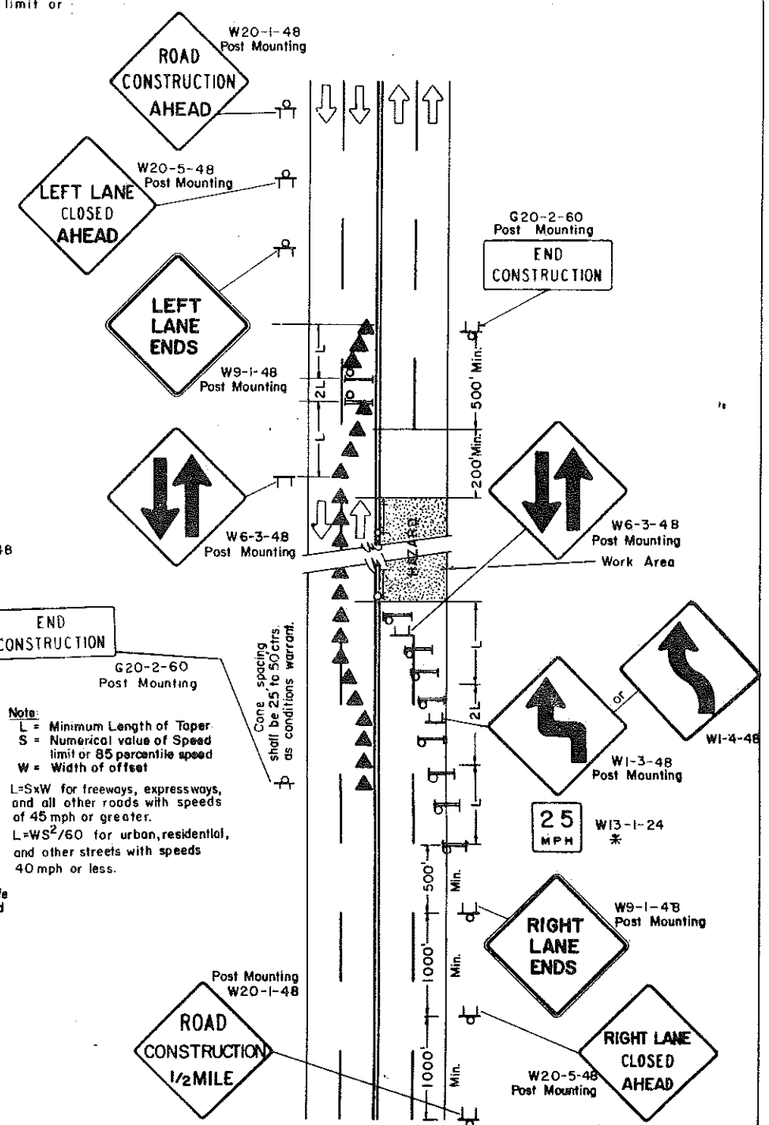
TYPE A
CONSTRUCTION SIGN LAYOUT
2 & 4 Lane Highway when traffic is maintained.
(Sign shown for one end only)
MAJOR WORK AREA
(shall be limited to 3 miles)

When the work area is left overnight the necessary warning signs shall remain and others added reflecting the conditions in the work area. Speed limit signs and advisory speed plates shall be added as needed.



TYPE B
CONSTRUCTION SIGN LAYOUT
2 Lane Highway where roadway is closed and detour is provided.
(Sign shown for one direction of travel only).
Longer than one day or outside of Major Work Area

NOTE, (Type B) If detour is hardsurfaced State Maintenance forces shall pavement mark. Existing striping shall be removed as required. Delineator will only be used when inslope are 4:1 or better and roadway alignment is visible to approaching vehicles. Vertical panels shall be used where roadway has steep slopes and alignment is not visible to approaching vehicles. Delineator and vertical panels shall be installed back to back.



Note:
L = Minimum Length of Taper
S = Numerical value of Speed limit or 85 percentile speed
W = Width of offset

L=SxW for freeways, expressways, and all other roads with speeds of 45 mph or greater.
$L=WS^2/60$ for urban, residential, and other streets with speeds 40 mph or less.

TYPE C
CONSTRUCTION SIGN LAYOUT

NO PARKING SIGNS: ALL NO PARKING SIGNS THAT HAVE DIRECTIONL ARROWS PLACED ON THEIR FACES SHALL BE PLACED AT 30 TO 45 DEGREE ANGLE AT ONCOMING TRAFFIC. NO PARKING SIGNS PLACED AT THE ABOVE ANGLES MAY HAVE THE SUPPORT TURNED AT THE CORRECT ANGLE UNLESS THE NO PARKING SIGN IS PLACED WITH ANOTHER SIGN THAT HAS TO BE PLACED AT 90 DEGREE ANGLE WITH ONCOMING TRAFFIC. IN WHICH CASE THE DETAILED ANGLE STRAP SHOULD BE USED TO MOUNT THE NO PARKING SIGN. MATERIAL USED FOR THE ATTACHMENT STRAPS SHALL BE INCLUDED IN THE PRICE BID FOR FLAT SHEET SIGNS. FLAT WASHERS & LOCKWASHERS SHALL BE USED WITH ALL NYLON WASHERS

NOTE:

Material:

Signing Backing: The sign backing material thickness shall be as follows.
Steel: Signs having a width of less than 30" shall use 14 gauge material. Signs 30" or more shall use 12 gauge material.

Aluminum: Aluminum Alloy 6061-T6 and 5052 -H38 shall have the following minimum thickness: All signs shall be 0.100 inch.

Stringers:

Flange Channel : All stringers shall be flange channel 1.12# per foot and of the length shown.

Square Tube, Perforated: All stringers shall be square tube, perforated 1 1/2"X1 1/2" and of the length shown.

Holes:

Flange Channel: All holes shall be punched round for 3/8" diameter bolts.

Square Tube, Perforated: All holes shall be punched round for 3/8" diameter bolts.

General:
See plans for sign numbers to be used at each location.
See Std. D-754-24 square tube , perforated mounting details.
See Std. D-754-25 for flange channel mounting details.

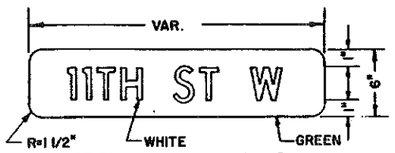
ATTACHMENT BRACKET DETAIL
(Square Tube, Perforated)



STREET NAME SIGN D3

NOTE: The ground mounted street name sign areas have been calculated using a 6"x36" sign panel. The city shall determine the size needed and inform the contractor of the exact length required to accomodate the message in accordance with following legend.

Size and Series: Street name signs 24", 30", or 36" standard length shall be fabricated using the following size and series capital letters:

LENGTH	STREET NAME OR NUMBER
24" Length	4" B,C,D Series
30" Length	4" B,C,D Series
36" Length	4" A,B,C,D Series

To provide maximum legibility, the widest letter shall be used whenever possible for each of the standard lengths specified. A minimum distance of 1/2" shall be allowed between legend and ends of the sign. The actual area shall be paid for at the contract unit price.

Material:

Sign Backing: The sign backing material thickness shall be as follows:
Steel: 14 Guage
Aluminum: Aluminum Alloy 6061-T6 shall have a minimum thickness of 0.080 inch.

Stringers:
Perforated Tube: All stringers shall be square tube perforated, the same size as support post.
Flange Channel: All stringers shall be flange channel, 1.12# per foot.
Holes: All holes shall be punched round for 3/8" diameter bolts.

General: See Std. D-754-24 for square tube, perforated mounting details.
See Std. D-754-25 for flange channel mounting details.

* 10 guage material has been used in the manufacturing of these support.

Assembly: 438 Single sign
439 Back to Back
440 Single sign each direction
441 Single sign one direction back to back other direction
442 Back to Back both directions
Assembly: 443 Back to Back single other direction
444 Back to Back all directions

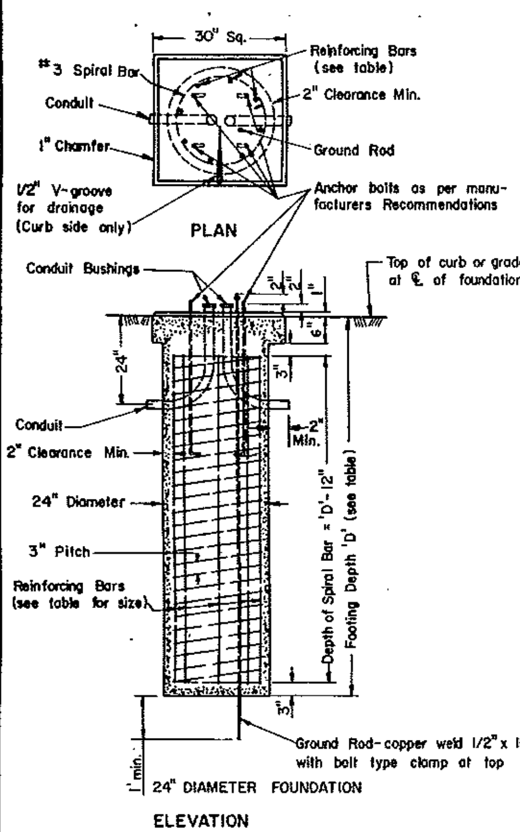
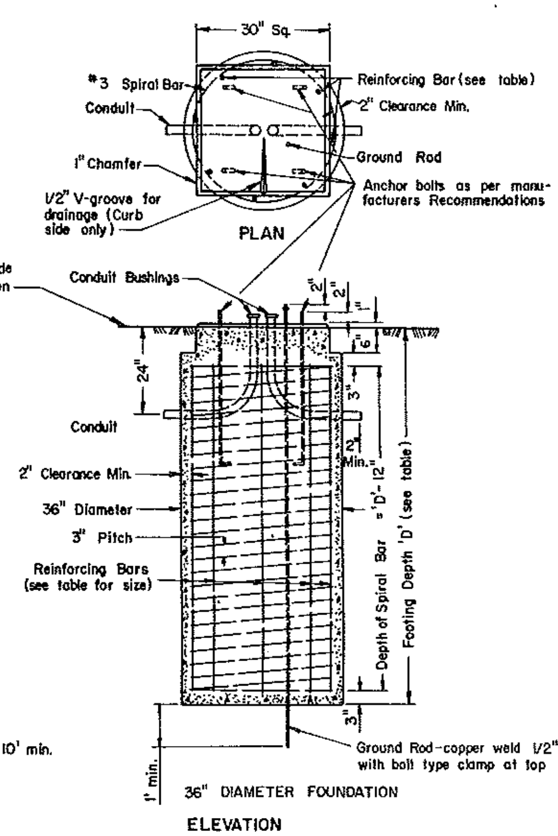
45'-50 Signal Mast Arm	8-#8	12'	8-#7	10'
Combination 50' Mounting Height				
0-25' Signal Mast Arm	8-#6	10'	8-#5	9'
26'-44' Signal Mast Arm	8-#8	12'	8-#7	10'
45'-50' Signal Mast Arm	8-#8	13'	8-#7	11'
Type IV Signal Standard	8-#7	10'	8-#6	9'
Type I, II, & III, V, VI, & VII Signal Std.	4-#5 (1)	4'	4-#5 (1)	3'

(1) No reinforcement is required if the anchor bolts extend to within 3" to 6" above the bottom of the foundation.

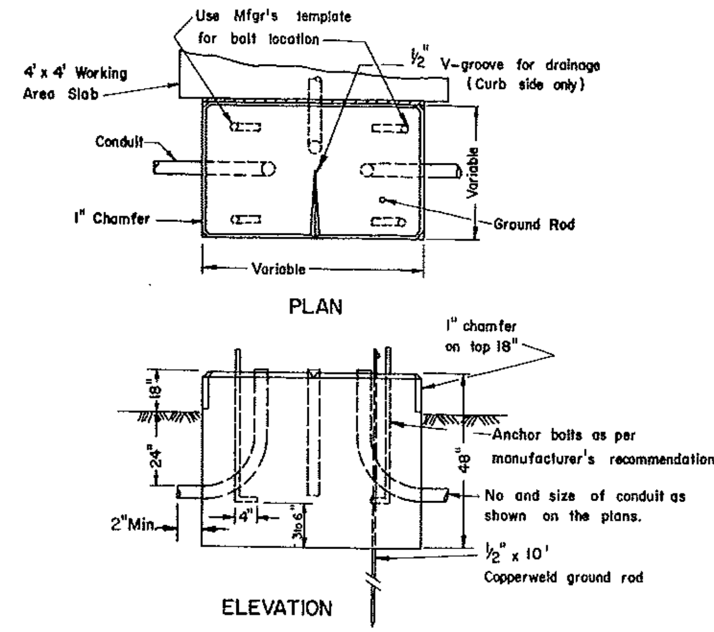
All reinforcing steel to be Grade 40 or 60.

If the Contractor elects to use a 24" square foundation, the next size smaller reinforcement bars may be substituted for those shown in the table. No substitutions may be made for a 36" square foundation. #4 tie bars on 12" c-c may be substituted for the spiral when a 24" square foundation is used. #4 round tie bars on 12" c-c may be substituted for the spiral when a 24" or 36" round foundation is used. Round tie bars shall have a min. of 12" lap.



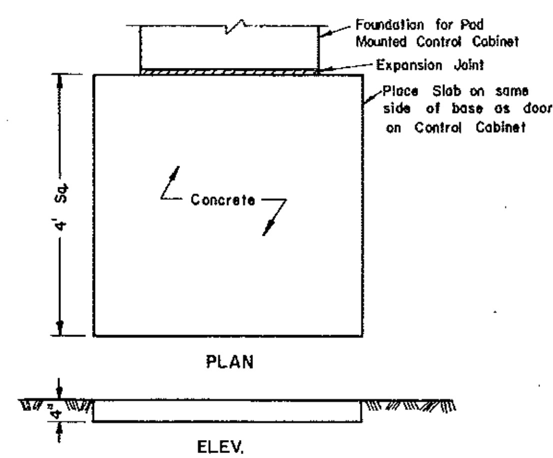


LIGHT & SIGNAL STANDARD FOUNDATION



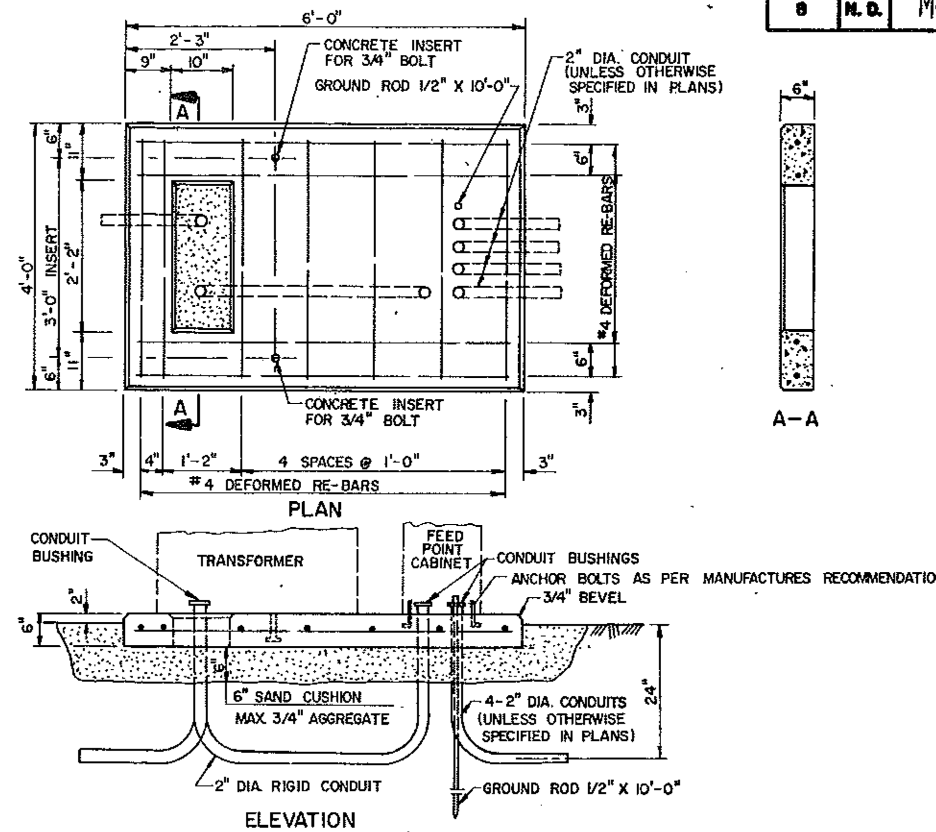
CONTROLLER CABINET FOUNDATION PAD MOUNT

The Controller Cabinet Foundation shall be bid as Concrete Foundations-Traffic Signals.



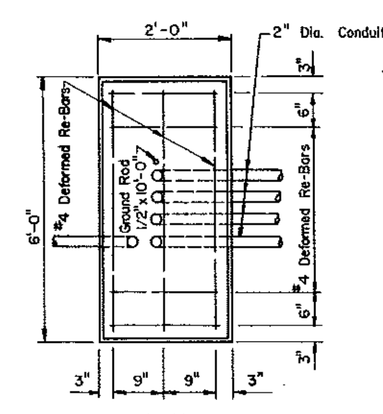
WORKING AREA SLAB

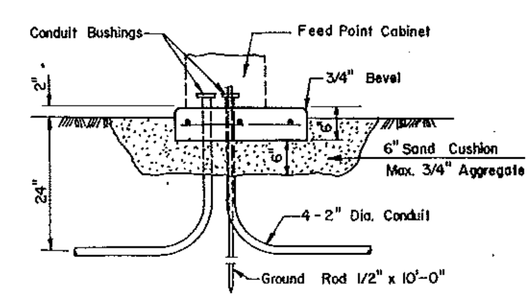
The Working Area Slab shall be installed where shown on the plans, and shall not be bid separarately but shall be included in the price bid for Concrete Foundations-Traffic Signals.



TRANSFORMER & FEED POINT CABINET FOUNDATION PAD MOUNT

The Transformer & Feed Point Cabinet Foundation Pad Mount shall be bid as Concrete Foundations-Feed Point Pad-Type A





FEED POINT CABINET FOUNDATION PAD MOUNT

The Feed-Point Cabinet Foundation Pad Mount shall be bid as Concrete Foundations-Feed Point Pad-Type B

NOTES:

Light & Signal Standard Foundations:

See plans for conduit size, number of bends and correct positioning for each foundation.

When conduit does not continue beyond the foundation, conduit with a 105° bend and bushings on both ends may be substituted for the 90° bends shown.

See plans for correct location of foundations. The grade and exact location shall be established by the Engineer in the field.

Maximum anchor bolt circle for the 24" foundation shall not exceed 18". Maximum anchor bolt circle for the 36" foundation shall not exceed 30".

Pad Mounted Signal Control Cabinet Foundation:

See plans for the number of 90° bends per foundation and correct positioning.

Foundation for Pad Mounted Signal Control Cabinets shall be of sufficient size so that there is a minimum of 3" of clearance from the outside edge of cabinet to the outside edge of the foundation on any side. The Contractor shall insure a watertight seal between the control cabinet and the foundation by caulking, except for V grove.

Working Area Slab:

The materials and preparation of this slab shall be as approved by the Engineer in the field.

Transformer & Feed Point Cabinet Foundation Pad Mounted:

Foundation shall have a wood float finish.

All conduits shown shall be installed. Conduit that is not used at this time shall be plugged.

Feed Point Cabinet Foundation Pad Mounted:

Foundation shall have wood float finish.

All conduits shown shall be installed. Conduit that is not used at this time shall be plugged.

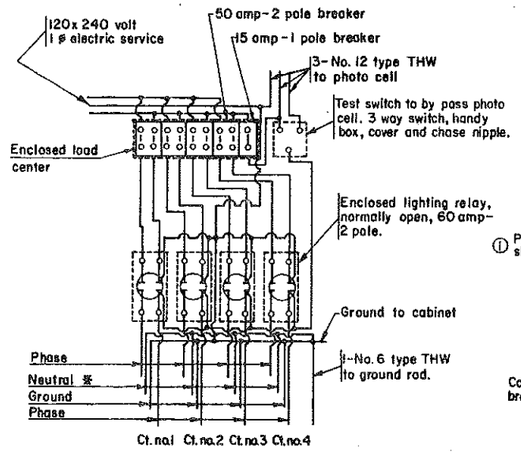
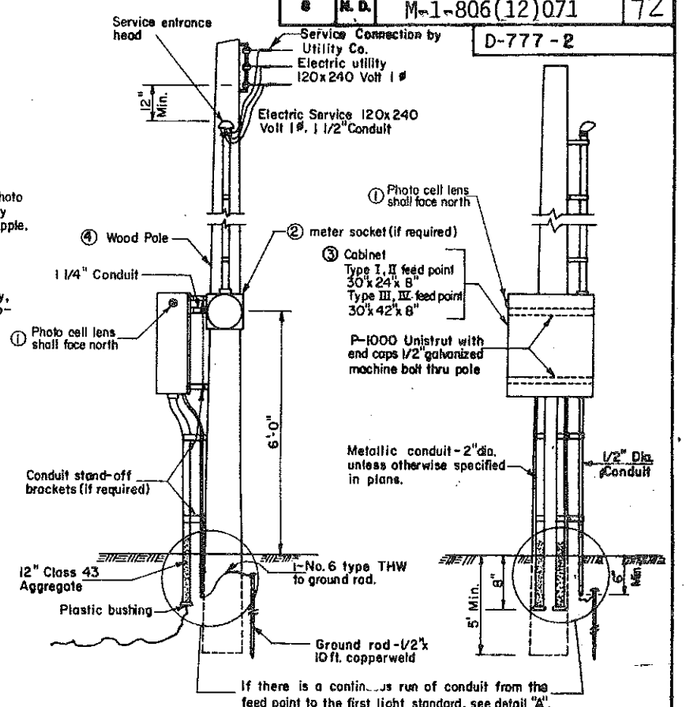
PHOTO CELL
MOUNTING DETAIL



※ Install when festoon circuit is required.

FEED POINT
TYPE IV

Type I feed point is similar to type IV except only one electrical circuit, one 50 amp-2 pole breaker and one lighting relay, normally open, shall be installed. Type II feed point is similar to type IV except only two electrical circuit, two 50 amp-2 pole breaker and two lighting relays, normally open, shall be installed. Type III feed point is similar to type IV except only three eletrical circuits, three 50 amp-2 pole breakers and three lighting relays, normally open, shall be installed.



POLE MOUNTED

NOTES:

① PHOTO CELL: The Electrical Contractor shall furnish and install the photoelectric cell.

② METER SOCKET: The contractor shall install the meter socket and trim if meter is required by local utility company. Meter to be furnished and installed by utility company.

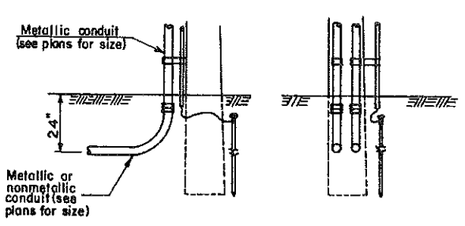
③ CABINET: Cabinet shall be N. E. M. A. 12 rating with lock drip shield and 1/2" plywood backing, stainless steel hardware. Paint plywood with 2 coats of oil base gray. Cabinet shall be shop coated with one coat of red lead and have two coats of exterior gray enamel.

④ WOOD POLE: Minimum 20 ft. Class VII full length penta pressure treated wood pole. (if required, see layout sheets)

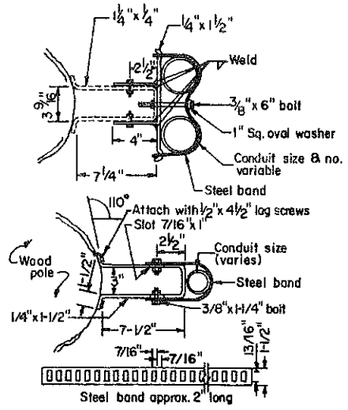
⑤ CABINET: Cabinet shall be 56" high x 26" wide x 14" deep. Minimum 12 ga. steel with provisions for padlock. Cabinet shall be weatherproof. Cabinet shall have one shop coat of red lead and two field coat of exterior dark green enamel.

⑥ GROUNDING GRID: The grounding grid shall have a ground resistance not to exceed 25 ohms. This shall be obtained by one or more 5/8"x10' copperweld ground rods in parallel or series at two corners. Minimum distance between ground unit assemblies shall be 6'-0".

⑦ METER LOCATION: The Meter (if required) shall not be mounted on the same side of the cabinet as the photo-cell is mounted.



DETAIL "A"



CONDUIT STANDOFF BRACKET

The conduit standoff brackets may be omitted if not required by the local utility company.

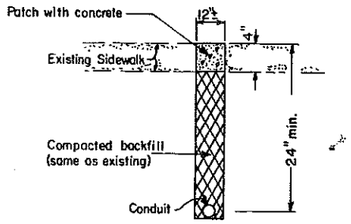
ASPHALT PATCH CONCRETE PATCH



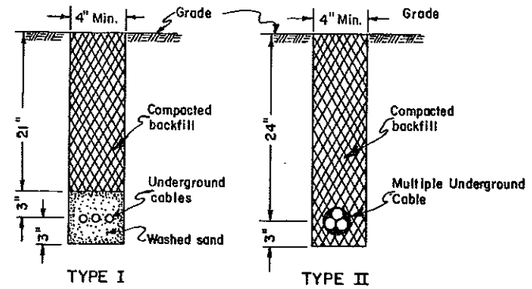
SIDEWALK PATCH

SURFACE PATCH DETAILS

NOTE:

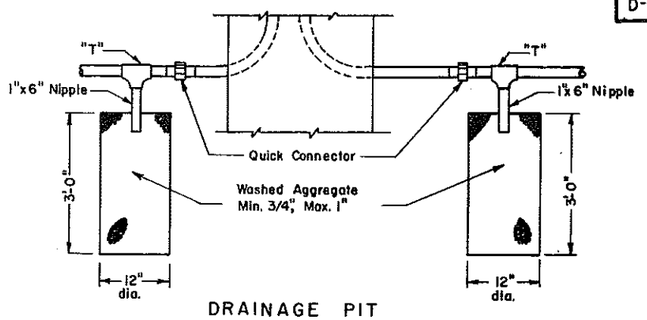
PATCHES: All trenches shall be saw-cut. The replacement concrete shall be P.C.C. pavement and the coarse aggregate gradation, maximum size and method of curing shall be as approved by the Engineer. The cost shall be included in the price bid for Conduit.

Immediately prior to pouring replacement concrete, all surfaces shall be painted with an approved epoxy compound.



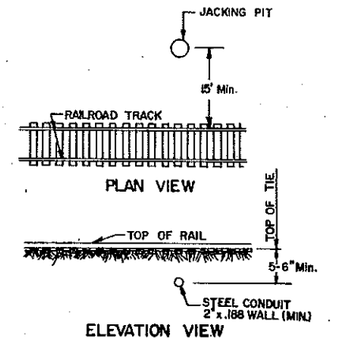
CABLE TRENCH

The entire area which is disturbed by the trenching shall be sodded, or as directed by the Engineer. The cost shall be included in the price bid for "Cable Trench".

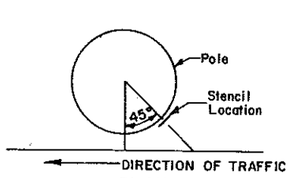


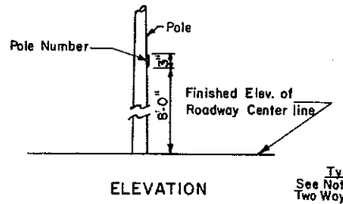
DRAINAGE PIT

Drainage pits shall be installed in both ends of the conduit runs. Except where conduit slopes enough for drainage to one end. (To be used for Traffic Signal Conduit Runs Only)



RAILROAD TRACK CONDUIT PLACEMENT





LIGHT STANDARD NUMBERING

NOTE:

POLE NUMBERING: The contractor shall stencil on each light standard the pole number in black paint on the roadway side of the pole, or adhesive coated plastic such as Scotch cal, Manufactured by 3M as approved by the Engineer. See layout sheets for pole numbers.
